QUESTIONS PRESENTED

Where a school system was previously *de jure* segregated in the elementary grades with respect to student assignment, in 1955 ended segregation at elementary schools and assigned all pupils to neighborhood attendance centers, between 1955 and 1965 was required to significantly expand its geographic boundaries, and in 1981 completed full implementation of two HEW-approved desegregation plans based upon a neighborhood school policy -------

1. Does the defendant school district as a precondition to a declaration of unitary status have an affirmative duty to correct all racial imbalances without regard to cause and to achieve maximum practicable integration in the entire system as currently composed?

2. Do the plaintiffs seeking district-wide court ordered remedies sustain their burden of proof by establishing a *de jure* violation in 1954 in the elementary schools and slight current racial imbalances; and, if so, may the defendant school district rebut the inference of continued constitutional violation by showing an absence of causation between the past *de jure* system and the current imbalances?

3. May the Court of Appeals set aside the trial court's findings of fact made in 1987 that the system is unitary and, based upon legal standards different from those applied by the trial court, make its own evaluation of the evidence and rule that plaintiffs are entitled to a district-wide desegregation remedy without providing the district court an opportunity to apply the new legal principles to either the record evidence or the conditions of the schools at the time of remand?

4. Is Title VI of the Civil Rights Act of 1964, 42 U.S.C. §2000d, violated simply because of an equal protection violation in 1954 coupled with current racial imbalances or must the evidence be evaluated under the specific burden of proof standards of Title VI?

LIST OF PARTIES

1. The original plaintiffs in this case were:

Linda Carol Brown, an infant, by Oliver Brown, her father and next friend; James Melden Emmanuel, an infant, by Sadie Emmanuel, his mother and next friend, Nancy Jane Todd, an infant, by Lucinda Todd, her mother and next friend; Ronald Douglas Richardson, an infant, by Iona Richardson, his mother and next friend; Katherine Louise Carper, an infant, by Lena Carper, his mother and next friend; Charles Hodison, an infant, by Shirley Hodison, his mother and next friend; Theron Lewis, Martha Lewis, Arthur Lewis, and Francis Lewis, infants, by Alma Lewis, their mother and next friend; Saundria Dorstella Brown, an infant, by Darlene Brown, her mother and next friend; Dwayne Dean Flemming and Silus Hardrick Flemming, infants, by Shirla Flemming, their mother and next friend; Donald Andrew Henderson and Vickie Ann Henderson, infants, by Mrs. Andrew Henderson, their mother and next friend, Ruth Ann Scales, infant, by Vivian Scales, her mother and next friend; Claude Arthur Emmerson and George Robert Emmerson, infants, by Marguerite Emmerson, their mother and next friend; and Victoria Jean Lawton and Carol Kay Lawton, by Mrs. Richard Lawton, their mother and next friend.

2. The plaintiffs who were permitted to intervene in this case in 1979 are:

> Charles and Kimberly Smith, minor children, by their mother and next friend, Linda Brown Smith; Danielle Threatt, a minor child, by her mother and next friend, Juda Gaines; Shawn, Tanya and Tara Woods, minor children, by their mother and next friend, Joyce Woods; Cordellia Mitchell and Connie Maxwell, minor children, by their mother and next friend, Barbara Mitchell; Arlene Jackson, a minor child, by her mother and next friend, Charlene Burkes; Carlesia and Cheryl Robinson, minor children, by their mother and next friend, Patricia Robinson; Rufus D. and Michelle Kelley, minor children, by their father and next friend, Rufus Kelley; John, Jackie, Johnny and Viola Davis, minor children, by their mother and next friend, Ruby Davis.

3. The original defendants in this case were:

> The Board of Education of Topeka, Shawnee County, Kansas; Kenneth McFarland, Superintendent of Schools of Topeka, Kansas; Frank Wilson, Principal of Sumner Elementary School; and the State of Kansas.

4. The defendants after the grant of intervention in 1979 are:

> Unified School District No. 501, Shawnee County, Kansas, the successor to the Board of Education of Topeka, Shawnee County, Kansas; John Carlin, Governor of the State of Kansas; Dorothy Groesbeck, Kay Groneman, Ruth Ann Oelsner, Floyd J. Grimes, Dale Carey, Harold H. Crist, and Keener, Marland Harwood, Joe Bergner, Theodore Von Fange, Jim Hiebert, Denise Apt, and Evelyn Whitcomb, members of the State of Kansas, Board of Education, all in their official capacities.

PETITION FOR WRIT OF CERTIORARI TO THE UNITED STATES COURT OF APPEALS FOR THE TENTH CIRCUIT

The Petitioner, the Board of Education of Topeka, Shawnee County, Kansas, by its successor, Unified School District No. 501, Shawnee County, Kansas, respectfully prays that a writ of certiorari issue to review the judgment and opinion of the United States Court of Appeals for the Tenth Circuit.

OPINIONS BELOW

The opinion of the Court of Appeals for the Tenth Circuit is reported at 978 F.2d 585 (10th Cir. 1992), and reprinted in Appendix Volume II, App. 1e-16e (majority opinion) and App. 1f-14f (dissenting opinion). This opinion incorporates by reference the previous opinion reported at 892 F.2d 851 (10th Cir. 1989) and reprinted in Appendix Volume II, App. 1b-102b (majority opinion) and App. 1c-193c (dissenting opinion).

The decision of the United States District Court for the District of Kansas is reported at 671 F.Supp. 1290 (D.Kan. 1987) and reprinted in Appendix Volume I, App. 1a-61a.

Prior opinions by this Court are *Brown v. Board of Education* (*Brown I*), 347 U.S. 483 (1954) and *Brown v. Board of Education* (*Brown II*), 349 U.S. 294 (1955). In 1992 this Court granted the defendant school district's Petition for Certiorari, vacated the 1989 opinion of the 10th Circuit (App. 1b-102b and 1c-193c), and remanded for reconsideration in light of

Board of Educ. v. Dowell, 498 U.S. 237, 111 S.Ct. 630 (1991) ("Dowell") and *Freeman v. Pitts*, 503 U.S. __, 112 S.Ct. 1430 (1992) ("Freeman"). *Brown v. Board of Education*, __ U.S. __, 112 S.Ct. 1657 (1992), reprinted in Appendix Volume II, App. 1d.

JURISDICTION

The judgment of the Court of Appeals was entered October 27, 1992, and is reprinted in Appendix Volume II, App. 1g-3g. A timely petition for rehearing was denied on January 28, 1993, and is reprinted in Appendix Volume II, App. 1h-2h. The jurisdiction of this Court is invoked under 28 U.S.C. §1254(1).

CONSTITUTIONAL AND STATUTORY PROVISIONS INVOLVED IN THE CASE

This case concerns the equal protection clause of the Fourteenth Amendment to the United States Constitution and Title VI of the Civil Rights Act of 1964, 42 U.S.C. §2000d, reprinted in Appendix Volume II, App. 1i.

STATEMENT OF THE CASE

Initial Litigation and Responses in the 1950's

In 1951, the parents of Topeka black elementary students filed[1] a class action challenging the

---

[1] The original trial was heard by a three-judge district court, convened under 28 U.S.C. §§2281 and 2284. *Brown I*, 247 U.S. at 486 n.1

constitutionality of the Kansas statute which permitted maintenance of separate schools for black and white elementary school children. Although segregated by student assignment, the elementary schools were found to be equal "with respect to buildings, transportation, curricula, and educational qualifications of teachers." *Brown I*, 347 U.S. at 486 n.1. In addition, the non-elementary grades were "non-segregated". *Id.*[2]

Despite the trial court having initially upheld the constitutionality of the Kansas statute, segregation was ended at 14 of the 18 formerly all-white elementary schools prior to this Court's 1954 opinion in *Brown I*.[3] App. 9a, 18c-19c. On remand following *Brown II*, the district court approved the district's neighborhood elementary school desegregation plan as "a good faith beginning" to bring about "complete desegregation," but retained jurisdiction. *Brown v. Board of Educ.*, 139 F.Supp. 468, 470 (D.Kan. 1955). There was neither an appeal of the approval of the desegregation plan nor further proceedings until intervention was granted in 1979. App. 5b-6b.

---

[2] In 1951, there was only one high school which was attended by all students without regard to race. In 1941, the junior high schools had been desegregated. App. 2a, 8a-9a.

[3] In 1951 there were 22 elementary schools--18 for white and 4 for black children. Brown v. Board of Educ., 98 F.Supp. 797 (D.Kan. 1951); App. 17c-18c. At its request this Court received maps in April, 1955, showing the Topeka school district's boundaries for the 1955-56 school year and the percentage of anticipated black-white enrollment for each school.

Overview of Schools in 1985

None of the *de jure* black schools remain today. Between 1967 and 1985 (the date of the most current statistics during the 1986 trial), enrollment decreased from 25,000+ to 15,000 (App. 29c n.8), while minority enrollment increased from 16% to 26%. App. 103c. Nevertheless, the district experienced very substantial desegregation. App. 20a-21a, 102-105c. Racial inventories at the neighborhood attendance centers during the 1960's are set forth in App. 30c n.9-34c n.13. Statistics for the 1985-86 school year are in App. 55c n.18-57c. Although there is not complete racial balance, there are no one-race minority schools in Topeka, nor schools on the threshold of such status. Thirty-one of the thirty-four schools are majority white by student assignment. Of the 3 schools that are majority-minority, the greatest concentration is 61.9% minority.[4] What has occurred since 1955 to make this possible?

---

[4] These facts are summarized by Judge Baldock in his appellate dissent. App. 6c, 16c-17c. As the trial court found, students "are not separated by race. The smallest percentage of white students in any school in the 1985-86 school year was thirty-eight percent." App. 20a. Nevertheless, the court of appeals found a current condition of segregation in Topeka, by resort to a mathematical measure of "racial identifiability" based upon a school's deviation from the district-wide average of minority enrollment. Any school which was less than 11% minority or more than 41% minority was deemed "racially identifiable" because it deviated more than 15% from the district-wide average of 26% minority in 1985. App. 47b-49b.

End of *de jure* Segregation in 1955 and Demographic Changes During the 1970's

In 1955, segregation was terminated at all remaining elementary buildings.[5] Governmental acts during the 1960's over which the district had no control substantially altered the demographics and the racial mix of some neighborhood schools. As the City of Topeka expanded its boundaries through annexation, more than doubling its geographic size between 1955 and 1965, the district was required to educate school age children living within the annexed areas. App. 60b, 78b, 28c-29c. The primary population growth occurred in the western area of Topeka, resulting in the construction of a new high school, 3 junior highs, and 6 elementary schools in the 1950's and early 1960's. App. 26a-27a. Whereas these schools initially served neighborhoods which were primarily white, at the same time, new elementary schools replaced existing facilities having mixed racial compositions. *Id.*

In the early 1960's, the construction of Interstate 70 highway had a segregative effect. Likewise, a number of federally subsidized housing projects were constructed causing racial imbalances. For example, across the street from Belvoir, 22.7% minority when annexed in 1960 and the school with the highest *black* enrollment in 1985 (54.7%), housing projects were

---

[5] As a result black children were present in eighteen of the twenty-three elementary schools. App. 9a. By the 1955-56 school year, all elementary school children attended their neighborhood school without regard to race. Within one year of the *Brown II* mandate, 56% of black elementary students were dispersed to the formerly all-white schools and 67% of white elementary students attended schools with black students. *Id.*

constructed in 1963 and 1965, increasing the minority enrollment to 59.7% in 1966. App. 81b-82b, 136c-139c. The newly constructed interstate highway formed its southern boundary. After Hudson opened in 1963 with 8% minority enrollment, housing projects also were constructed in its attendance area in 1965, 1967, and 1970. By 1985, Hudson was 46.6% minority. App. 139c-142c. Projects were constructed in the Lafayette attendance area (13% minority in 1955) in 1961, 1962, and 1970, by which time the minority enrollment was 57%.[6] App. 83b-84b, 145c-147c.

HEW Desegregation Plans Approval and Implementation in the 1970's

In 1974, in response to formal administrative proceedings initiated by HEW to obtain compliance with Title VI, the district developed a short-range plan[7]. In 1975, the Board adopted a resolution for closing schools to promote integration and also created a citizen's advisory committee, an affirmative action program to encourage minority employment, and a learning center "operated in a manner to encourage integration". App. 48c-49c. In 1976, the Board adopted a long range (five-year) plan and altered the Board election system, improving opportunities for minority membership. App. 54a-55a, 49c-55c.

---

[6] Lafayette was *de jure* white. App. 145c. Lafayette's greatest minority percentage (68.9%) was in 1975. By 1986 it was reduced to 56.8% minority, through implementation of the HEW plans. App. 145c-147c.

[7] The short-range plan closed two junior high schools in 1975 and two elementary schools, including Monroe --- the last of the formerly all-black elementary schools. App. 10b, 14b, 48c.

In 1976, HEW dismissed the proceedings on the basis of the district's commitment to implementation of the 1976 plan. App. 6b, 51c. This five-year integrative plan, which continued adherence to a neighborhood school policy, included elimination of all remaining optional attendance areas; closure of five of the nine junior high schools; transfer of the ninth grade to the senior high schools in the 1980-81 school year; establishing six middle schools by the conversion of four junior high schools and the construction of two additional middle schools; and closure of six elementary schools.[8] App. 14b, 50c-51c. The district's desegregation indices for elementary schools improved "significantly" between 1975 and 1981. App. 64b n.71; *see also* 100c-105c (dissent's expanded discussion of the desegregation indices).

Conversion to middle schools in 1980 resulted in the reassignment of 190 teachers, which was implemented "to achieve a distribution of minority staff members which will comply with requirements of the law." App. 52c-53c. At the time of trial, every school had minority personnel. In the elementary schools personnel were 10.78% minority, with individual schools ranging from 4.3% minority to 18.18% minority. The minority average for middle school personnel was 13.22%, with individual schools ranging from 6.67% to 16.67%. There were from five to eleven minority faculty members in each high school. App. 128c-131c.

---

[8] By 1978 all the *de jure* black schools had been closed. In 1955 McKinley was closed. App. 9a. Buchanan was closed in 1959 and Washington in 1962. *Id.* Monroe was closed in 1978. App. 25a.

Stability During the 1980's

By the 1981-82 school year, the HEW-approved plans had been fully implemented, and student racial composition was virtually stable from 1981 to time of trial. App. 21a-22a, 55c. The target minority percentages approved by HEW in 1976 were either met or improved upon.[9] App. 69b n.76.

Intervention in 1979 and Trial in 1986

In 1979, at the beginning of the fourth year of the five-year plan, a group of black elementary students and parents intervened, alleging the district was not unitary.[10] Although not a part of the original case, the class action was subsequently expanded to include black middle and high school students; and, in March, 1986, the complaint was amended to include Title VI claims.

---

[9] While HEW did not approve the projected enrollments at two elementary schools (Lafayette and Belvoir) their projections were substantially improved upon by the district. In the five years since completion of the plan, "minority enrollments increased in the primarily white schools, bringing them towards or over 10% minority, while the percentage of minority students at [higher minority enrollment] schools has remained steady or dropped slightly. The most significant change is that the schools with the highest white percentages have gained some minority students." App. 69b n.76; *see also* 54c n.17.

[10] *See Brown v. Board of Educ.*, 84 F.R.D. 383 (D.Kan. 1979). Two weeks after the motion to intervene was filed, HEW completed its investigation of a patron complaint regarding the long-range plan and the district's open enrollment transfer policy. HEW found that the district's assignment policies did not violate Title VI. Likewise, HEW concluded that the open enrollment policy had not significantly affected the racial composition of schools. Thereafter, the Board adopted a majority-to-minority policy to assure transfers had an integrative effect. App. 51c-52c.

After a month-long trial, the trial court found the school district's "neighborhood school approach has achieved a high level of integration". App. 60a. In determining "[t]here is no illegal, intentional, systematic *or residual separation* of the races" (App. 55a) (emphasis added), the court carefully examined 18 factors.[11] It concluded that school construction has not promoted residential segregation or segregated schools (App. 28a); space additions were not intentionally used to promote segregation, and the schools are not racially imbalanced today because of space additions constructed in the past (App. 24a-25a); current attendance patterns do not reflect residential choice caused by the prior *de jure* school segregation (App. 19a); school boundary locations are determined by consistently applied race-neutral neighborhood school principles without gerrymandering (App. 30a, 32a, 56a); any segregative effect of optional attendance zones in existence until 1976 does not remain today (App. 23a); school closings over the past 30 years indicate a policy of desegregation (App. 25a); and the school transfer policy is used to improve racial balance (App. 22a). The court found that the school district had "proven by a preponderance of the evidence that [it] is a unitary school system." App. 14a. It found no constitutional (App. 57a) or Title VI violation. App. 57a-58a.

---

[11] The court evaluated: statistical measures of student population; student transfer policy; optional attendance zones; space additions; school closings; school openings; schoolsite location; school boundary location; history of the schools; facilities; extracurricular activities; curriculum; transportation; faculty and staff; community attitudes; equality of education; opportunities for desegregation; and other factors. App. 15a-55a.

Appellate Review from 1987 to 1993

Plaintiffs appealed. Plaintiffs no longer claimed that the district lacks unitary status with respect to facilities, extracurricular activities, curriculum, transportation, and equality of education.[12] App. 46b n.53. On appeal, plaintiffs only claimed that student and faculty and staff assignments[13] evidence current segregation. A divided panel reversed. App. 1b-193c. The school district's Petition for Certiorari was granted. App. 1d. The opinion was vacated, and the case was remanded for further consideration in light of *Dowell* and *Freeman*. *Id*. The Tenth Circuit again reverses and reinstates its prior opinion in full, with additions. App. 1e-14f. A Petition for Rehearing with Suggestion for Rehearing En Banc was denied, although five of the ten judges voted to grant rehearing *en banc*. App. 1h-2h.

The majority panel holds inadequate the district court's definition of a unitary school system as "'one in which the characteristics of the 1954 dual system did not exist, or, if they exist, are not the result of past or present intentional segregative conduct of the' school district." App. 17b. Although finding these to be necessary ingredients, the majority also imposes the

---

[12] Based upon the evidence at trial, the court concluded the racial composition of the district's schools had an insignificant impact on student academic achievement from 1980 to 1986. As stated by the court, "inferior achievement, as a vestige of segregation, has been eliminated." App. 50a; *see also* 47a-50a.

[13] No fault was alleged or found with the district's hiring practices. App. 72b.

requirement that the district establish that it has used "every effort to achieve the greatest possible degree of actual desegregation, taking into account the practicalities of the situation." *Id.* Under the majority decision, "[w]hat more can be done and should be done, if anything, is the final component in the determination of unitary status." App. 35b.

Although the district court held that the defendants "have proven by a preponderance of the evidence that U.S.D. #501 is a unitary school system" (App. 14a), the majority holds that the "conclusion as to unitariness was fatally infected by the inadequacy of the burden of proof standard to which it held the school district." App. 43b. It rejects the district court's finding that the causal link between the 1954 *de jure* system and the current racial imbalances has been broken. App. 11e. Based upon adoption of the plaintiffs' standard[14] of racial identifiability and its own review of the record, it concludes that current racial imbalances are "causally connected to the prior *de jure* system of segregation". App. 94b. It discounts the HEW plans (App. 59b) and rejects as mistaken the view that before a declaration of unitary status a formerly *de jure* system has no duty to correct imbalances caused by demographic changes beyond its control. App. 65b, 7e n.6, 10e. The

---

[14] The majority adopts the standard of racial identifiability of ± 15% deviation from the district wide average as "perfectly reasonable" in a formerly *de jure* system (App. 48b n.55) and holds that statistics alone evidence a current condition of segregation. App. 18b-19b, 47b-49b. The dissent points out that "statistical measures of racial balance, [are] valid sociological objectives, but not a constitutional command with respect to student assignment." App. 7c.

majority remands for remedy. App. 16e. It finds a constitutional violation and holds a Title VI violation follows without application of a distinct burden of proof. App. 96b.

REASONS FOR ALLOWANCE OF THE WRIT

The Court of Appeals' resolution of this historic case turns upon a fundamental question of federal constitutional law - What is the extent of the affirmative duty of a formerly *de jure* segregated school system to achieve racial balance? It resolves that question by holding that the affirmative duty requires correction of racial imbalances to the maximum extent practicable. This expanded view of the affirmative duty infects the court's examination of the definition of a unitary system, the sufficiency of the evidence to sustain the burden of proof shifted to the school district, the materiality of demographic changes, and the adequacy of a neighborhood school policy. The Tenth Circuit's view conflicts with prior decisions of this Court, which clearly enunciate the principle that a school district has a duty to correct only those imbalances causally related to the unconstitutional segregation. Correction of the Tenth Circuit's error by this Court is imperative.

The Court of Appeals' reversal and remand for remedy disregards the proper allocation of functions between trial and appellate courts. The evidence of current segregation and causation was complex and highly controverted. The Tenth Circuit revises legal standards, engages in appellate fact-finding, and remands for development of a court ordered remedy,

even though the trial court has never had an opportunity to apply current legal standards or to consider the post-1985 conditions of the Topeka schools.

A. The Ruling Below Expands the Affirmative Duty of Formerly *De Jure* Segregated School Systems Beyond that Required by this Court

The affirmative duty of formerly segregated school systems to correct the constitutional violation is a fundamental principle of desegregation law. This Court has also consistently held that the Constitution is not violated by racial imbalances, without more. *Milliken v. Bradley*, 433 U.S. 267, 280 n.14 (1977). As made explicit in *Freeman*, "[t]he duty and responsibility of a school district once segregated by law is to take all steps necessary to eliminate the vestiges of the unconstitutional *de jure* system." *Id.*, 112 S.Ct. at 1443. It is only racial imbalances "traceable, in a proximate way, to constitutional violations" which are the proper subject of remedial orders. *Id.* at 1446.

The Tenth Circuit's reversal of the district court's finding that all vestiges of *de jure* segregation have been eliminated and its remand for remedy is inconsistent with the clearly established limitation upon a school district's affirmative duty. The majority's decision is permeated by continued adherence to a rejected, overly expansive view of the affirmative duty to achieve racial balance, particularly as to student assignment.

The majority panel adopts dual requirements for a unitary system - the elimination of vestiges *and* the achievement of the greatest possible degree of racial

balance reasonably practicable. App. 17b. This definition mirrors the continuing affirmative duty imposed by the Tenth Circuit in Oklahoma City desegregation case - the affirmative duty, despite the unitary finding, "not to take any action that would impede the process of disestablishing the dual system and its effects." *Dowell v. Bd. of Educ. of Okla. City Public Schools*, 890 F.2d 1483, 1504 (10th Cir. 1989), quoted in *Dowell*, 111 S.Ct. at 635. This Court, when reversing, rejects a standard for dissolution of an injunction tailored to fulfill this affirmative duty as one which "would condemn a school district, once governed by a board which intentionally discriminated, to judicial tutelage for the indefinite future." *Dowell*, 111 S.Ct. at 638.

In 1991, *Freeman*[15] made explicit the rejection of the Tenth Circuit's rationale that a formerly *de jure* system has a continuing affirmative duty to correct racial disparities, even when not caused by the former *de jure* system.

> The Court of Appeals was mistaken in ruling that our opinion in *Swann* requires "awkward," "inconvenient" and "even bizarre" measures to achieve racial balance in student assignments in the late phases of carrying out

---

[15] The reversed Eleventh Circuit opinion, *Pitts by Pitts v. Freeman*, 887 F.2d 1438 (11th Cir. 1989), like the reversed Dowell opinion of the Tenth Circuit, was premised upon a continuing affirmative duty to achieve racial balance. "We also reject the district court's refusal to require the DCSS to eradicate segregation caused by demographic changes." *Id.* at 1449.

> a decree, when the imbalance is attributable neither to the prior *de jure* system nor to a later violation by the school district but rather to independent demographic forces.

Freeman, 112 S.Ct. at 1447. Despite direction to consider *Dowell* and *Freeman* upon remand, the majority panel in 1992 reinstates its 1989 opinion which, like the Tenth and Eleventh Circuit opinions reversed by this Court, was predicated upon the premise that "the law requires the maximum desegregation reasonably feasible, and [when] evidence suggests that more can be done, unitariness must await the implementation of those further steps." App. 93b. The dissent notes the similarity between the majority's view and the view of Justice Blackman in *Freeman*, a view that does not represent the majority of the Court. App. 9f-n.6.

The starting point for the Court's flawed analysis is a definition of current segregation which places undue emphasis upon the ± 15% deviation from the district average of minority students with respect to each attendance center, while rejecting composite indices measuring integration. Compare App. 47b-49b with App. 102c-104c. As the majority concedes, "The case law is decidedly unclear as to the precise meaning" of the term "current condition of segregation." App. 18b. Yet, it is this finding which triggers the shift of the burden of proof to the defendant district.[16]

---

[16] The burden is shifted as to all grades, even though there has *never* been a finding of *de jure* segregation except in elementary school student assignments. At the time of *Brown I*, there was only one high

It has been suggested that the "allocation of the burden of proof foreordains the result in almost all of the 'vestige of past discrimination' cases." *Freeman*, 112 S.Ct. at 1452 (Scalia, J., concurring). School authorities are required to establish the negative - to show that imbalances are *not* attributable to the past *de jure* discrimination. Plaintiffs often prevail merely because of the allocation, the continuing validity of which Justice Scalia has questioned. *Id.*

In the Tenth Circuit, this allocation of the burden of proof is extraordinarily onerous, not only because of the adoption of the ± 15% deviation standard, but also because of the circuit's adherence to the enhanced view of the affirmative duty. That view controls the majority's discussion of the showing necessary to rebut the presumption of continued violation. The court states, "The district may carry its burden by showing that is has acted affirmatively to desegregate. Absent such proof, the court must presume that current segregation is the result of prior intentional state action." App. 30b. The court concludes that the integrative techniques used by the district are insufficient. App. 69b-72b. Failure to sustain its burden to rebut the presumption is identified as the "key" to the court's reversal. App. 58b.[17]

---

school, and junior highs had been desegregated since 1941. App. 8a-9a.

[17] The majority's 1992 opinion reiterates its view that the district court improperly resolved the burden of proof issue, particularly by requiring plaintiffs to show discriminatory intent. App. 5e-6e. The dissent continues to disagree (App. 3f) but urges that because of ambiguity as to the standard applied, the case should be remanded to district court for complete reconsideration. *Id.*

The majority's exclusive reliance upon affirmative action as the sole means to evidence a break in the causal link conflicts with this Court's recognition that demographic forces independent of the schools may be the cause of racial imbalances. Under *Freeman*, as well as prior decisions, a constitutional violation is present only if imbalances are causally linked to the *de jure* past. *Freeman*, 112 S.Ct. at 1447; *Pasadena City Bd. of Education v. Spangler*, 427 U.S. 424, 434-35 (1976); *Milliken v. Bradley*, 418 U.S. 717, 745 (1974); *Milliken v. Bradley*, 433 U.S. at 280. Where the demographic changes which result in racially imbalanced neighborhood schools are unrelated to the prior violation, the school district has no duty to achieve system-wide racial balance in the student population. *Freeman*, 112 S.Ct. at 1448.

In Topeka, the district court held that residential patterns, which are reflected in neighborhood school attendance statistics, are not vestiges. "The court is persuaded that *de jure* segregation either has no significant effect upon residential patterns in Topeka or that its impact on residential patterns had attenuated to insignificance." App. 56a. "Demographic forces, uncontrolled by defendants, form the racial composition of the schools." App. 57a.

The majority's reversal of the causation issue is not because the factual findings regarding demographics are clearly erroneous. Rather, it rejects as "clearly wrong" the view of defendants' experts that "changing demographics which resulted in unfavorable racial balances at various schools excuses the school board

from achieving more acceptable racial balances." App. 65b.[18] The majority in its 1992 opinion unsuccessfully attempts to reconcile its view with *Freeman*. App. 10e. Although the majority gives lip service to the rule of causation, it removes any utility from the rule by adhering to its 1989 view that the presumption of continuing causation can be rebutted only by evidence of affirmative action which corrected all imbalances without regard to their cause.[19] *See* App. 30b. By rejecting the district court's approach as to the effect of demographic changes, the majority proceeds on the premise that demographic forces causing population changes bear a real and substantial

---

[18] This rejection is nearly identical to that of the Eleventh Circuit in *Pitts by Pitts v. Freeman*, 887 F.2d at 1448, which was reversed by this Court. The Eleventh Circuit states,

> We hold that a school system that has not achieved unitary status must take affirmative steps to gain and maintain a desegregated school population. The DCSS may not shirk its constitutional duties by pointing to demographic shifts occurring prior to unitary status.

Id.

[19] The majority further rejects the district court's finding that demographic forces caused the current racial imbalances by finding a "considerable tension" between that holding and the "district court's observation that demographics have had a desegregative effect on student assignment in Topeka schools." App. 8e n.6. These two findings by the district court are not in conflict. They refer to independent population shifts, the increasing racial integration in the western part of Topeka (*E.g.*, App. 38a-39a) and the segregative effect of public housing projects in other parts of the city. *E.g.*, App. 33a.

relation to the *de jure* violation. *Freeman* explicitly rejects this premise. *Freeman*, 112 S.Ct. at 1448.[20]

The majority also utilizes its expanded view of the affirmative duty to reject as constitutionally insufficient the integrative actions of the Topeka schools undertaken within its system of neighborhood schools. It finds the "district court's finding of unitariness flawed by the undue deference . . . to the school district's neighborhood school policy . . . ." App. 44b. Topeka is characterized as a system that at "best" did not resist demographic forces, and full implementation of two integration plans is totally ignored. *Compare* App. 7e *with* App. 10f-11f. The dissent, agreeing with the trial court, identifies the Topeka schools as a system where the duty to integrate is consistent with the neighborhood school concept. App. 190e.

The result, more vividly than the Tenth Circuit's discussion of legal principles, exemplifies the conflict with current Supreme Court jurisprudence. The Tenth Circuit directs a remedy even though the racial

---

[20] The majority also attempts to factually distinguish *Freeman*. It contrasts Topeka with DeKalb County schools by finding that in DeKalb County, but not in Topeka, there was a "moment" when racial identifiability had been eliminated. App. 7e n.6. Of course, this "moment" is illusory. At best, in DeKalb County, the "moment" was based upon solely theoretical student assignments which would have resulted from the court approved desegregation plan if there had been no changes in demographics between the adoption and implementation of the plan. In fact, there was no time during which the DeKalb County schools were not racially identifiable. *Freeman*, 112 S.Ct. at 1439. Given the central role of causation in constitutional litigation, this Court certainly could not have meant to rule that demographic changes can be considered only if they occur after a "moment" when a desegregation plan has been adopted but not implemented.

imbalances, which the district court found not to be causally linked to the *de jure* past, are substantially less than those resulting from neighborhood schools in Oklahoma City and DeKalb County.[21] In Topeka in 1985, when the students were 26% minority and 18.6% black, there were no schools which were 90% black. App. 20a. Only one elementary school in Topeka had a slight majority black population (App. 11a), no middle school was more than 43% black (Rec.Ex.Vol. IV at 170-74; Ex.Vol. II at 159), and no high school was more than 26% black. Rec.Ex.Vol. IV at 176. Statistical indices evidence relatively high levels of integration. App. 21a-22a. In contrast, in the 47% black DeKalb County schools, 50% of the black students attended schools that were over 90% black. *Freeman*, 112 S.Ct. at 1438. Five of 22 high schools and 18 of 74 elementary schools were more than 94% black. *Id.* In Oklahoma City, where elementary students were 36% black[22], the return to neighborhood schools for grades K through 4 resulted in 11 of 64 elementary schools becoming 96% or more black and

---

[21] In Oklahoma City, the Finger plan, which required busing, had been in place since 1972. The Board adopted the student reassignment plan, which relied upon neighborhood assignments for students in grades K-4 in the beginning of the 1985-86 school year. *Dowell*, 111 S.Ct. at 641 (Marshall, J., dissenting).

In *Freeman*, the court-approved 1969 HEW plan established a neighborhood school policy for Dekalb County. In the first year of implementation, the 1969-70 school year, when there were 5.6% black students in the district, one elementary school was 76% black and another 51% black. *Freeman*, 112 S.Ct. at 1438-39.

[22] *Dowell v. Bd. of Educ. of Okl. City Public Schools*, 890 F.2d 1483, 1512 (10th Cir. 1989) (Baldock, J., dissenting).

approximately 44% of all Afro-American children in such grades being assigned to one race schools. *Dowell*, 111 S.Ct. at 641 (Marshall, J., dissenting).

The record of affirmative integrative action in Topeka shows error in the majority's conclusion that in Topeka, in contrast to Oklahoma City and DeKalb County, "the school board did very little to desegregate its student assignment practices." App. 7e. It is true that Topeka did not use busing, as did Oklahoma City. Its desegregation action is similar to, but significantly more effective than, that in DeKalb County. Both Topeka and DeKalb County implemented HEW-approved plans based upon neighborhood schools. In DeKalb County, demographic changes prevented the plan from producing racial balancing of student assignment (*Freeman*, 112 S.Ct. at 1439), whereas in Topeka the resulting integration of attendance centers was greater than the plan's projections. App. 69b n.76. In Topeka, unlike DeKalb County, plaintiffs did not prevail on the issue of quality of education. Compare App. 46b n.53 with *Freeman*, 112 S.Ct. at 1442. The majority "is unable to see the desegregative effect of many changes because it has strayed far beyond the purpose of desegregation law." App. 58c. The different outcomes cannot be rationalized.

Nearly forty years have elapsed since this Court's initial decision in this case. Yet, as illustrated by comparison of the trial judge's opinion and the court of appeals' two majority opinions and two dissenting opinions, the decisions of this Court provide fertile grounds for conflicting views of the extent of the

affirmative duty to integrate.[23] Because of the public nature of the interest involved and nationwide ongoing litigation concerning unitary status, this Court should clarify the extent of the affirmative duty and consider whether the extraordinary allocation of the burden of proof in unitary status litigation remains warranted generations after *Brown I*.

B. This Court Should Accept Certiorari to Exercise its Supervisory Power

The trial occurred over six years ago, in October, 1986. The Tenth Circuit reverses, but rather than

---

[23] Although the issue of the affirmative duty was discussed in both *Freeman* and *Dowell*, resolution of those cases was narrow because of the injunction imposing the Finger Plan in *Dowell* and the finding of a lawful student assignment in *Freeman*, arising from the plaintiffs' concession that the DeKalb County desegregation plan "effectively desegregated DCSS for a period of time." *Freeman*, 112 S.Ct. at 1439. In addition to the matters discussed above, the majority's view of good faith also exhibits an expanded view of the affirmative duty. The majority identifies as a "potential problem" with *Dowell* "the possibility of immediate resegregation following a declaration of unitariness." App. 13e-14e. It therefore directs the district court when evaluating good faith to consider "specific policies, decisions, and courses of action that extend into the future," including consideration of "continued commitment to integration" after dissolution of the decree. App. 12e, 14e. Contrary to this approach, the good faith requirement of *Dowell* evidences that a school district has "accepted the principle of racial equality and will not suffer intentional discrimination in the future." *Freeman*, 112 S.Ct. at 1449-50. This does not suggest that the good faith requirement can be used indirectly as a vehicle to extend district court control and require affirmative integrative action after unitariness. *See Dowell*, 111 S.Ct. at 637-38.

remanding for reconsideration of unitary status, directs development of a remedy.

The remand usurps the trial court's function of determining *whether the Topeka schools* are unitary under current legal standards. At the 1986 trial, neither the parties nor the court had the benefit of this Court's recent rulings. Decisions regarding the presentation of evidence and expert opinions were influenced by legal standards prior to *Dowell* and *Freeman*. The majority remands for remedy based upon its application of current case law to the controverted factual evidence of the history and status of the schools in 1985-86. Even if the majority's legal analysis were not in conflict with decisions of this Court, the remand would nevertheless violate the rule that when, as here, it is held that a trial court committed errors of law, the case must be remanded for revised findings under the proper legal standard. *Pullman-Standard v. Swint*, 456 U.S. 273 (1982).[24]

---

[24] The rare exception to remand for reconsideration upon reversal for errors of law arises when only one reasonable conclusion can be drawn from the record evidence. *Pullman-Standard v. Swint*, 456 U.S. at 292. This is not such a case. Although the statistics are uncontroverted, the conclusions to be drawn from these facts are highly controverted. This is made evident by the contrasting the conflicting findings made by the district and appellate courts. The majority rejects the trial court's finding that "the statistics indicate that students in U.S.D. #501 are not separated by race" (App. 20a), and concludes, based upon its own review, that "the racially overbalanced schools . . . add up to a current condition of segregation." App. 49b. Likewise, with respect to faculty and staff, the majority reverses the finding that the "district's assignment policies [do not] serve to identify schools as intended for white or black students." App. 43a. Although the district court rejected the allegation of a correlation between minority staff

In both *Dowell* and *Freeman*, where new legal standards were adopted, this Court specifically directed that it was the district courts, not the courts of appeals, which were to make new findings of fact under the revised legal standards.[25] Any other disposition would have conflicted with the flexibility of the unitariness standard.

The remand interferes with the discretion vested in trial judges in desegregation litigation. The term "unitary" has no fixed meaning and does not "confine the *discretion* and authority of the *District Court* in a way that departs from traditional equitable principles." *Freeman*, 112 S.Ct. at 1444 (emphasis added).
The role of trial judges in school desegregation litigation is unique because the courts are being asked

---

assignment and high minority student population (App. 41a-42a), the majority found such correlation "clear" (App. 54b), based upon its evaluation of "the data on its face." App. 50b. The majority, in addition to finding errors of law, also engaged in appellate fact finding as to whether current imbalances were vestiges of the *de jure* system. The district court held "[d]emographic forces, uncontrolled by defendants, form the racial composition of the schools." App. 57a. The appellate court held the school district did not establish the absence of a causal link between the *de jure* past and the present. App. 58b.

[25] In *Dowell*, after reversing and propounding the standards applicable to the dissolution of an injunction imposing a desegregation plan, this Court remanded the matter to district court. *Dowell*, 111 S.Ct. at 638. Upon reversing the holding of the Eleventh Circuit in *Freeman* rejecting an incremental release of judicial control over desegregation plans, this Court stated that further proceedings were appropriate where the district court, "not having our analysis before it, did not have the opportunity to make specific findings and conclusions on [a particular] aspect of the case." *Freeman*, 112 S.Ct. at 1449. The dissent urges a similar disposition of this case. App. 3f-4f.

to "restructure the administration" of the local system of public education. *Dayton Bd. of Ed. v. Brinkman*, 433 U.S. 406, 410 (1977). "[T]he elimination of the more conspicuous forms of governmentally ordained racial segregation over the last 25 years counsels undiminished deference to the factual adjudications of the federal trial judges in [school desegregation cases], uniquely situated as those judges are to appraise the societal forces at work in the communities where they sit." *Columbus Bd. of Ed. v. Penick*, 443 U.S. 449, 470 (1979) (Stewart, J., concurring). Commentators identify *Freeman* as exhibiting increased deference to district court determinations in desegregation cases. *The Supreme Court - Leading Cases*, 106 Harv. L. Rev. 163, 257 (1992). The Tenth Circuit has improperly withdrawn the discretion and authority of the district court to determine the need for a court ordered remedy.

The remand violates the rule that a remedy is justifiable only when a constitutional violation exists. *Freeman*, 112 S.Ct. at 1445. No court has considered the current status of the Topeka schools to determine whether a constitutional violation currently exists. Under the order of remand, current conditions are deemed relevant only when considering the parameters of a remedy. App. 15e.

CONCLUSION

For the foregoing reasons, the Petitioner prays that the Court grant review. The Court should again vacate the Tenth Circuit opinion and remand with directions to return the matter to district court.

Respectfully submitted,

MEMORANDUM AND ORDER

[Filed April 9, 1987]

I. Introduction.

In 1954, the Supreme Court's landmark decision in this case signaled the close of a disgraceful period of *de jure* segregation in schools of Topeka, Kansas and other parts of the nation. This case has returned to this court for a trial to determine whether the vestiges of *de jure* segregation have been eliminated. The trial was conducted from October 6, 1986 to October 31, 1986. Post-trial briefs were filed in December, 1986. Reply briefs followed on January 28, 1987. The court is now prepared to issue the following findings of fact and conclusions of law.

II. History of the Case.

This case started in 1951 as a class action challenging a state statute which gave the defendant Board of Education of Topeka, Shawnee County, the power to organize separate schools for black and white elementary students, grades one through six. At that time, there were eighteen white elementary schools and four black elementary schools. White students were assigned to the schools on the basis of neighborhood districts. No transportation was afforded white students. Transportation to the black schools was provided by the Board of Education. Students could

attend the black school of their choice. In practical effect, one of the original plaintiffs, Oliver Brown, was suing for the right to have his daughter, Linda, attend a neighborhood white school instead of taking a bus to a black school.

The State of Kansas intervened in the trial to defend the constitutionality of the state legislation authorizing elementary school segregation at the option of school boards in cities of the first class. The trial court, on August 3, 1951, refused to "substitute our own views for the declared law by the Supreme Court" and upheld the constitutionality of state-authorized segregation in Topeka's public elementary schools. 98 F.Supp. at 798.

The Supreme Court accepted the trial court's finding that the physical facilities of white and black schools in Topeka and other "tangible" factors were equal, but concluded that "in the field of public education the doctrine of 'separate but equal' has no place." 347 U.S. at 495. This finding was based on the conclusion that separating children "from others of similar age and qualifications solely because of their race generates a feeling of inferiority as to their status in the community that may affect their hearts and minds in a way unlikely ever to be undone." 347 U.S. at 494.

At the close of the Court's opinion, reargument was ordered on the question of relief. One year later, in May 1955, the Court noted that "substantial progress" in the elimination of racial discrimination in public

schools had been made in Kansas. 349 U.S. at 299. The case was then remanded to the U.S. District Court of Kansas to fashion and effectuate such an equitable decree as was "necessary and proper to admit to public schools on a racially nondiscriminatory basis with all deliberate speed the parties to these cases." 349 U.S. at 301. The Court noted that: "Traditionally, equity had been characterized by a practical flexibility in shaping its remedies and by a facility for adjusting and reconciling public and private needs." 349 U.S. at 300.

Following the remand of this case from the Supreme Court, the district court considered a remedial decree submitted by the Board of Education. The "central principle" of the decree, as described by the district court, was that children, regardless of color, would attend the school in the district of their residence. 139 F.Supp. at 469. Addressing the concern that some all-black schools remained under the Board's plan, the court stated:

> Desegregation does not mean that there must be intermingling of the races in all school districts. It means only that they may not be prevented from intermingling or going to school together because of race or color.
>
> If it is a fact, as we understand it is, with respect to Buchanan School that the district is inhabited entirely by colored students, no violation of any constitutional right results because they are compelled to attend the school in the district in which they live.

> It is the conclusion of the court that while complete desegregation has not been accomplished in the Topeka School System, a good faith effort toward that end has been made and that, therefore, the plan adopted by the Board of Education of the City of Topeka be approved as a good faith beginning to bring about complete desegregation.

139 F.Supp. at 470.

No appeal was taken from the district court's order. This case remained inactive until 1979 when a new group of parents with school children in Topeka's public schools were permitted to intervene. The new plaintiffs charge that the mandate to desegregate Topeka's schools has never been completed. After a long process of discovery and the consideration of pretrial motions, the trial of this case was accomplished.

III. The Parties.

The new named plaintiffs in this case are a group of parents with black children attending various schools in Unified School District #501. In place of the Board of Education of Topeka, Shawnee County, Kansas, Unified School District (U.S.D.) #501 has been named a defendant. In 1965, by a state statute unifying school districts across Kansas, U.S.D. #501 was designated as the successor to Topeka Public Schools No. 23, the

district served by the original defendant Board of Education. U.S.D. #501 includes public schools in the same area concerned in the original complaint plus substantial additional territory annexed by the City of Topeka since this case was filed. Prior to the creation of U.S.D. #501, the boundaries of Topeka Public Schools No. 23 grew with the city limits of Topeka. The boundaries of U.S.D. #501 and the city limits are no longer coterminous. There are three other school districts in areas outlying Topeka, Kansas. These districts are not parties to this action.

The State Board of Education (SBE) is a party defendant in this case. It was created by state constitutional amendment in 1966. The SBE became an operating body in 1969. It supervises elementary and secondary education in Kansas.

IV. Legal Principles.

Since 1955, the defendant school district and its predecessor have been charged "with the affirmative duty to take whatever steps might be necessary to convert to a unitary system in which racial discrimination would be eliminated root and branch." *Green v. County School Board*, 391 U.S. 430, 437-38 (1968). "Each instance of a failure or refusal to fulfill this affirmative duty continues the violation of the Fourteenth Amendment." *Columbus Board of Education v. Penick*, 443 U.S. 449, 459 (1979).

Unfortunately, even in 1987, it is not clear what unitariness entails. Note, *Allocating the Burden of Proof After A Finding of Unitariness in School Desegregation Litigation*, 100 HARV.L.REV. 653, 662 (1987). "[T]he nature of the desegregation remedy is to be determined by the nature and scope of the constitutional violation." *Milliken v. Bradley*, 433 U.S. 267, 280 (1977). *De facto* segregation (segregation caused by private choice) and segregation caused by authorities other than those sued in this case, are not part of the constitutional violation found in 1954. See *Keyes v. School District No. 1*, 413 U.S. 189, 198 (1973); *Swann v. Charlotte-Meckienburg Board of Education*, 402 U.S. 1, 23 (1971). Therefore, a unitary school system must be one that has reversed the segregation caused by the school board's dual system in 1954. *Dayton Board of Education v. Brinkman*, 443 U.S. 526, 538 (1979) ("Dayton II").

The mixing of students of different races in the schools is probably the most important factor in determining unitariness. (After all, separate but *equal* schools violate the Constitution.) But, complete racial balance is not required by the Constitution. *Swann*, *supra*, 402 U.S. at 24; *Dayton Board of Education v. Brinkman*, 433 U.S. 406, 413 and 417 (1977) ("Dayton I"). Even the existence of a "small number of one-race or virtually one-race schools within a district is not in and of itself the mark of a system that still practices segregation by law." *Swann*, *supra*, 402 U.S. at 26.

Many other factors should be considered as well. *Green*, *supra*, 391 U.S. at 435 (faculty, staff, transportation, extracurricular activities and facilities); *Keyes*, *supra*, 413 U.S. at 196, 213-14 (school site location, school size, school renovations and additions, student attendance zones, student assignment and transfer options, mobile classroom units, transportation of students, assignment of faculty and staff, community and school administration attitudes).

Evidence of segregative motive or the absence of such intent is relevant but not controlling in determining unitariness. "The measure of the post-Brown I conduct of a school board under an unsatisfied duty to liquidate a dual system is the effectiveness, not the purpose, of the actions in decreasing or increasing the segregation caused by the dual system." *Dayton II*, *supra*, 443 U.S. at 538.

In sum, a unitary school system is one in which the characteristics of the 1954 dual system either do not exist or, if they exist are not the result of past or present intentional segregative conduct of defendants or their predecessors.

V. The Progress of Desegregation in Unified School District #501.

Desegregation started in Topeka's public schools prior to the landmark Supreme Court decision in this case. In 1951, there was only one public high school.

It served white and black students. Segregation in Topeka's junior high schools had been declared unconstitutional by the Kansas Supreme Court in 1941. *Graham v. Board of Education*, 153 Kan. 840, 114 P.2d 313 (1941). In September 1953, black elementary students who lived in the districts of two all-white elementary schools (Randolph and Southwest) were permitted to attend those schools. In January 1954, twelve other formerly all-white elementary schools permitted black student enrollment.

One of the all-black elementary schools, McKinley, was closed at the end of the 1954-55 school year, when this case was remanded by the Supreme Court. By the 1955-56 school year, black elementary students attended eighteen of the twenty-three elementary schools. The following school year, fifty-six percent of black elementary students attended formerly all-white schools; sixty-seven percent of white students attended schools with black students.[1]

In 1959, Buchanan Elementary School, a *de jure* black school which had remained all black or virtually all black, was closed. Washington Elementary School, the penultimate *de jure* black school in operation, was closed in 1962.

---

[1] Unless stated otherwise, the numbers stated in this opinion do not include students attending special programs such as Head Start, Capitol City School, or special education programs.

By the 1968-69 school year, further progress at desegregation was evident. The last *de jure* black school (Monroe) had a twenty-five percent white student population. It was one of four schools, out of thirty-four elementary schools, with a majority black student population: Belvoir (56.76%); Lafayette (52.68%); Monroe (74.78%); Parkdale (90.84%). Roughly fifty percent of black elementary students attended schools with majority black student populations. The percentage attending schools with a black student population of seventy-five percent or greater was 27.5%. Approximately fifty percent of all white students attended schools which were ninety percent or more white.

Of the eleven junior high schools, one had a majority minority student population--East Topeka Junior High (60.43%). Roughly forty percent of all black junior high school student attended this school. Approximately sixty percent of all white junior high school students attended schools with white populations exceeding ninety percent.

In the 1968-69 school year, there were three high schools in U.S.D. #501. None of the high schools had a majority minority population. Topeka West High School was virtually all white (98.36%). Roughly a third of all white high school students attended this school.

During the 1968-69 school year, the total minority student population was approximately seventeen percent; the total black student population was near twelve percent.

The student attendance figures for the 1985-86 school year bear little resemblance to the figures for 1954. None of the former *de jure* black schools were open in 1985. Of the twenty-six elementary schools, only one had a majority black student population.[2] Three had majority minority populations: Belvoir (61.86%); Lafayette (56.81%); and Highland Park North (57.93%). Roughly twenty-nine percent of all black elementary students attended these schools. Five elementary schools had student populations over ninety percent white. These schools accounted for approximately twenty-four percent of the white elementary student population. No school had a ninety-five percent white student population.

In 1980, the school district changed from a junior high (grades seven through nine) to a middle school format (grades seven and eight). In the 1985-86 school year, no middle school had a majority minority student population. Two middle schools had white student populations exceeding ninety percent--French (93.77%) and Landon (90.71%). These two schools served approximately thirty-one percent of the white middle school student population. Landon has since been closed and its student population has been assigned to French.

---

[2] Highland Park North Elementary School was one student short of a 50% black student body.

None of the three high schools in the district had a majority minority population in the 1985-86 school year. One high school, Topeka West High School, had a white student population exceeding ninety percent--92.06%. It served roughly forty-one percent of all white high school students in the district.

The student population for the 1985-86 school year was 26.1% minority and 18.6% black.

In sum, when this case was filed, 100% of black elementary students attended 100% black schools. Last school year, only eight percent of black elementary students attended a majority black school. Even in this school (Belvoir), there was a substantial white student population (38.14%).[3]

VI. Plaintiffs' Contentions.

Plaintiffs acknowledge the substantial progress made toward desegregation in U.S.D. #501. Plaintiffs contend, however, that over the years the district has passed up opportunities to improve racial balance throughout the district; that the vestiges of the *de jure* system of segregation remain in the form of "racially identifiable" schools; and that the existence of these schools illustrates that the mandate of the Supreme Court remains unfulfilled. Plaintiffs stress statistical

---

[3] There was testimony that the minority student population of Belvoir increased to 66% in the current school year.

measures of racial identity. Under these measures, if the racial apportionment of students in one school varies from the district average by too great a percentage, then the school is racially identifiable.

Plaintiffs assert that the racial identity of schools, as determined by student racial ratios, is corroborated by faculty and staff assignments, community attitudes and students' test scores. Plaintiffs further contend that the racial identity of schools has been maintained by a variety of means (e.g., school site location, optional attendance zones, school additions and boundary location).

VII. Defendants' Contentions.

Defendants contend that U.S.D. #501 is now a unitary school system. Defendants believe plaintiffs place too much emphasis on the racial balance of students as a measure of a constitutional violation, and that demographic forces or other forces beyond the school district's control are responsible for the racial imbalance present in the schools. Defendants believe that factors other than student assignment count in the determination of a constitutional violation, and that these factors (e.g., allocation of resources, uniformity of curricula and instruction) indicate the district operates a unitary school system.

VIII. Burden of Proof.

Plaintiffs have the burden of proving that illegal segregation exists in U.S.D. #501. Whether the burden of proof should shift to the defendants to prove that illegal segregation does not exist, because of the history of intentional segregation within the district or because of the racial imbalance in the schools' student bodies today, is a difficult question. The passage of time, demographic dynamics and changes in administrative personnel detract from the justification for the *Keyes* presumption in this case.[4] Nor does this case fit the *Swann* presumption easily.[5] Regardless of the operation of these presumptions, the court believes defendants have proven by a preponderance of the evidence that U.S.D. #501 is a unitary school system.

---

[4] In *Keyes*, *supra*, 413 U.S. at 208, the Court held that proof of "intentionally segregative school board actions in a meaningful portion of a school system . . . creates a presumption that other segregated schooling within the system is not adventitious."

[5] In *Swann*, *supra*, 402 U.S. at 26, the Court held that school authorities had the burden of proving that student assignments were "genuinely nondiscriminatory" when a desegregation plan left "some schools that are all or predominantly of one race . . ."

IX. Does Illegal Segregation Remain in U.S.D. #501?

A. Statistical Measures of Student Population.

The court shall examine many factors to decide whether illegal segregation exists in U.S.D. #501. But, the statistical measures of the racial makeup of the schools' student bodies are of prime importance. Often in school desegregation cases such statistics alone prove a pattern of discrimination. The separation of the races is the chief vestige of *de jure* segregation. If the races are no longer separated, then the system may be unitary. Since the separation of students by race can be represented statistically, such measures are important to this case.[6]

A major issue in this case is the importance of statistical racial *balance* throughout the district--i.e., maintaining a ratio of students in each school that approximates the racial mix of the entire district. The statistics indicate that white and minority students are not separated by race. Significant numbers of white and nonwhite students attend every school in the district. But, there are disparities in the racial makeup of various schools' enrollments. Plaintiffs hinge their

---

[6] Racial inventories of students in the district were not kept between 1956 and 1966. The first complete inventory available to the court is for the 1967-68 school year. So, precise measures of racial mixing are not known for the first decade following the remand of the case from the Supreme Court.

case on this absence of racial balance in all schools and the failure of the defendants to take action to promote racial balance.

Plaintiffs suggest that a school is racially identifiable or imbalanced if its percentage of minority students falls beyond ± 15% of the district average of minority students. For instance, since about 26% of the district's elementary students are nonwhite, plaintiffs contend that a school with a minority enrollment of less than 11% is a "white" school, and a school with a minority population of more than 41% is a "nonwhite" school. Plaintiffs agree that tighter and wider ranges of racial balance have been used in desegregation litigation, but emphasize that under any range some racially identifiable or imbalanced schools exist in the district.[7] Since the district is responsible for student assignment, it is responsible for the racially identifiable schools.

Undoubtedly, racial imbalance *can* be the result of past segregative acts by school authorities. But, racial imbalances is unconstitutional only if it *is* caused by defendants' purposeful racial discrimination. See

---

[7] One could contend that for a school to be racially identifiable, the student population should be balanced at fifty percent white and fifty percent nonwhite. This is not plaintiffs' view. They argue that, in Topeka, a fifty percent nonwhite school is identifiably nonwhite because the size of the deviation from the district average of nonwhite students means the school has significantly more nonwhite students than other schools.

Columbus Board of Education v. Penick, *supra*, 443 U.S. at 464-65; *Dayton I*, *supra*, 433 U.S. at 420; *Washington v. Davis*, 426 U.S. 229, 240 (1976). The Supreme Court has held that racial balance is not a constitutional imperative even in district with a history of purposeful segregation. *Swann*, *supra*, 402 U.S. at 24; *Dayton I*, *supra*, 433 U.S. at 417; *Milliken v. Bradley*, *supra*, 433 U.S. at 280 n. 14. Other courts have approved mandatory desegregation plans in which schools fell outside the ± 15% or ± 20% range of racial balance. See *Price v. Denison Independent School District*, 694 F.2d 334 (5th Cir. 1982); *Diaz v. San Jose Unified School Dt.*, 633 F.Supp. 808, 814 (N.D.Cal. 1985); *Singleton v. Jackson Municipal Separate School Dt.*, 541 F.Supp. 904 (S.D. Miss. 1981). (The *Price* case contains an extensive. well-reasoned criticism of a trial court's reliance upon statistical racial imbalance among schools in Denison, Texas to prove illegal segregation.) Therefore, racial balance is not an essential attribute of a unitary school system.

Nevertheless, racially conscious student assignment with the goal of racial balance has been approved as a remedy in desegregation litigation. *Swann*, *supra*, 402 U.S. at 25. This is because school segregation has an inertia which often cannot be countered by a purely neutral force. In order to achieve "the greatest possible degree of actual desegregation," (*Swann*, *supra*, 402 U.S. at 26) and, perhaps, to spread the burdens and advantages of desegregation uniformly throughout a

district, courts have used racial balance as a target for remedial action.

Still, the need for a remedial decree targeted toward racial balance depends upon whether the present imbalance derives from the *de jure* system or other intentional discrimination. It is difficult to trace the cause of racial imbalance from the record of this case. A race-neutral system of student assignment based on neighborhood schools has been employed in the district for more than three decades. Although there is some dispute as to whether racial balance has been maximized under the constraints of this system, it cannot be gainsaid that residence rather than race determines school attendance in the district and that the effects of *de jure* segregation have been substantially countered.

It could be argued that current racial residential patterns and, in turn, student attendance patterns have been affected by defendants' past discriminatory acts, but there has been little or no evidence to support this contention. Obviously, several forces, both social and economic, can influence residential choice. See *Milliken v. Bradley*, 418 U.S. 717, 756 n. 2 (Stewart, J., concurring); *Austin Independent School District v. United States*, 429 U.S. 990, 994 (1976) (Powell, J. concurring). Thirty years ago, the then Attorney General of Kansas speculated that segregated residential patterns in Topeka were influenced by the segregated school system. There is good reason to

question the strength of the alleged causality, however. For instance, black students received free transportation to black elementary schools under the *de jure* system. (Linda Brown lived near the white Sumner School and took a bus to Monroe.) This may have reduced the incentive to live near black schools. Additionally, in most instances white schools were located near black schools (Lowman Hill near Buchanan; Parkdale near Washington; Grant near McKinley; Van Buren near Monroe). This may have dissipated segregated residential patterns. Finally, two expert witnesses gave conflicting views of current research on whether school segregation causes residential segregation.

The only evidence concerning the district's recent actions regarding housing indicates that the district has opposed housing projects which might impede racial balance, and that the district has attempted to persuade realtors of the uniform quality of the public schools across the district.

Even assuming the influence of school segregation upon residential choice 30 years ago, the steady progress of school and residential integration in Topeka over three decades (particularly in formerly segregated attendance zones) indicates that the effects of school segregation on residential choice, if any, are not cognizable today.[8]

---

[8] School integration may lead to white flight and residential segregation. There was slight evidence in this case that some white flight resulted from integration of the elementary schools. But the evidence did not establish that current residential patterns have been significantly

Therefore, although the issue in this case is whether additional remedial action is appropriate, it is inappropriate to use racial balance (a remedial target) as the determining factor of whether remedial action is necessary because: 1) racial balance is not a *per se* measure of an unconstitutional level of segregation; and 2) after 30 years, one cannot assume that the racial imbalance which remains is a vestige of the *de jure* system or other illegal segregation. The court concludes that statistical measures of racial mixing are an important factor in determining whether vestiges of segregation remain in U.S.D. #501. But, the issue is not decided by whether the schools are racially balanced.

The statistics indicate that students in U.S.D. #501 are not separated by race. The smallest percentage of white students in any school in the 1985-86 school year was thirty-eight percent. The smallest percentage of nonwhite students in any school was six percent. Of thirty-five schools, three had minority populations exceeded fifty percent; eight had white populations exceeding ninety percent. Only one school had a black student population which exceeded fifty percent. Only eight percent of all black elementary students (4.7% of all black students) attended this school. Only twenty-four percent of all white elementary students attended schools with white student populations exceeding ninety percent. In the 1985-86 school year, there were two middle schools with white populations exceeding ninety percent. The student populations of the two schools

---

affected by white flight.

have been consolidated for the 1986-87 school year. One of plaintiffs' experts, Dr. Gordon Foster, testified that if trends continue, the consolidated school will soon become racially balanced as measured by the ± 15% standard. Forty-one percent of the district's white high school students attend a high school with a ninety-two percentage white population. But the nonwhite student population of this school is within sixteen percent of the district average of nonwhite high school students. Dr. Foster also predicated that this school would soon become racially nonidentifiable.

When one totals the student populations of the eight schools plaintiffs have labeled as racially identifiable nonwhite or vestige schools (Eisenhower Middle School and the following elementary schools: Quinton Heights, Lowman Hill, Highland Park North, Hudson, Lafayette, Avondale East and Belvoir), one finds that the schools are attended by more white students than black students (1,248 white students, 1,079 black students). Indeed, white students make up close to half (49.3%) of all the students that attend these allegedly nonwhite schools.

Statistical indices designed to measure deviation from racial balance (dissimilarity) and opportunity for interracial contact (exposure) indicate relatively high levels of integration in U.S.D.#501, although the levels may be lower than other school systems with mandatory busing plans or other more aggressive racially conscious student assignment plans. In general, the

statistical measures of racial balance have been stable over the past five years.[9]

The student attendance figures for U.S.D. #501 reflect an enduring integrated nondiscriminatory system of education. Although racial balance has not be achieved, students are not separated on the basis of race. Thus, a vestige of segregation has been eliminated.

B. Student Transfer Policy.

The evidence does not suggest that transfers have been permitted to avoid racial mixing. Indeed, in recent years, the student transfer policy has been used to improve racial balance of schools within the district. In 1978, a policy allowing students freedom of choice within the district was adopted. Within two years, the policy was discontinued because it contributed slightly to racial imbalance. In 1980, a majority to minority transfer policy was established. It is still in effect. Under this policy, transfers which do not improve racial balance are disallowed. Therefore, the district

---

[9] The number of "racially identifiable" schools (using the ± 15% standard) has increased from nine to fifteen in recent years. But, this increase involves four schools which in their history have crisscrossed the ± 15% threshold and two schools which have had gradually growing minority populations. The increase does not appear to have been caused by district action.

has employed a student transfer policy which encourages integration, not segregation.

C. Optional Attendance Zones.

Students residing in optional attendance zones have the option of attending more than one school. The use of optional attendance zones has been scrutinized because optional zones may allow white students living in racially mixed districts to attend an adjacent white school rather than a racially mixed school. Optional zones were used in Topeka's public schools before 1954. Since 1954, optional zones have been used in racially mixed residential areas and all-white locations. Hence, optional zones, if they had a segregative purpose, were not used solely to segregate. A large number of optional zones were eliminated in 1964. All optional zones were eliminated in 1976. It is difficult to determine the effect of optional zones in U.S.D. #501 without knowing how many children lived in the zones or how children of different races exercised their options. Defendants' expert, Dr. William Clark, estimated, without direct contradiction, that 7.6% of elementary students and 9.2% of junior high students lived in optional zones in the 1963-64 school year. He also concluded the zones did not have a significant segregative effect. The court believes any segregative effect of the zones was slight and does not remain today.

D. Space Additions.

Plaintiffs have criticized the use of space additions, such as portable classrooms, at racially imbalanced schools. Plaintiffs have alleged that school authorities chose to perpetuate segregation at these schools (particularly "white" schools), instead of shifting school boundaries or otherwise reassigning students in a manner that would improve racial balance. For instance, in some cases, additions were made to racially imbalanced schools in areas of residential growth when schools in the more racially mixed central parts of Topeka were becoming underutilized.

The use of space additions was consistent with a race-neutral neighborhood school policy. It was not a widespread practice, for instance, to expand school boundaries and make space additions to allow children to avoid integrated school settings. Nor were students encourages to transfer to segregated schools at which space additions were made. Furthermore, it appears from the report of plaintiffs' expert, William Lamson, that space additions were employed at predominantly white, predominantly nonwhite and racially balanced schools. Ex. 219 at 185. It is possible that actions inconsistent with neighborhood schools could have been taken to avoid space additions and improve racial balance. But, it has not been shown that space additions were intentionally used t promote segregation

or that schools are racially imbalanced today because of space additions.[10]

E. School Closings.

The school closings over thirty years in the district indicate a policy of desegregation. All four *de jure* black schools have been closed. The *de jure* black school (McKinley) in North Topeka, the small area of the city north of the Kansas River, was closed in 1955 and the black children were assigned to Grant or Quincy elementary schools. Grant was closed in 1977. Now all elementary students in North Topeka attend Quincy School. Washington and Buchanan schools were both closed by 1962. Monroe was closed in 1978. The Pierce School was closed in 1959, one year after its attendance zone was annexed into the district. It

---

[10] Plaintiffs chose to emphasize that virtually all the portable classrooms placed at the senior high schools were placed at Topeka West High School--the identifiably "white" senior high school in the district. Of course, if portable classrooms had not been placed at Topeka West, the racial identify of the school would not have changed. Instead, more students would have attended the other high schools which may have had a better racial balance, but which were probably overcrowded. Plaintiffs have not denied the overcrowding problems experienced at the high schools. Nor was the feasibility of placing portable classrooms at other schools well established. Placing portable classrooms at Topeka High, the school adjacent to Topeka West, would have been very difficult. Even by plaintiffs' standard, Topeka West is now on the threshold of racial balance. Therefore, the placement of portable classrooms at Topeka West has not prevented desegregation.

was an all-black school. When Parkdale was closed in 1978, it had a minority student population of 85.62%. Three schools in central Topeka closed with relatively high minority populations--Van Buren (1964, 40% est.); Central Park (1980, 42.9%); Polk (1979, 48%). Three schools with relatively low minority populations have been closed--Dawson (1966, 0% est.); Sheldon (1977, 3%); Landon Middle School (1986, 9.2%). Three schools were closed when they had minority populations near the district average--Rice (1981, 33.5%); Grant (1977, 21%; Clay (1975, 25.3%).[11]

Although a few schools with desireable racial balances have been closed, there is no pattern of closing schools to avoid racial mixing. Indeed, on the whole, the closing of schools appear to have been an integrative device.

F. School Opening.

Several schools with virtually all-white enrollments opened in the 1950s or early 1960s. These schools included McClure, Sheldon, McEachron, McCarter, Bishop and Hudson elementary schools, as well as Jardine, Eisenhower and Landon junior high schools, and Topeka West Senior High School. These schools were in areas of residential expansion. During the

---

[11] The Lincoln Elementary School was racially mixed when it closed in 1962.

same period, new schools with mixed racial compositions replaced existing facilities at Lowman Hill, Lafayette, Highland Park Central, Central Park and Belvoir elementary schools. The latter two schools were built in 1967. Linn Elementary School was built in 1964 and appears to have had a significant minority enrollment[12] In 1970, French Junior High School opened as a predominantly white school. In 1980, Chase Middle School opened as a racially mixed school and Central Park Elementary School reopened as Robinson Middle School, a racially mixed school.

Although, on its face, the construction of schools, particularly on the west side of the district, appears to have promoted racial separation, the court does not believe that the district's school construction policy was intended to maintain or promote segregation. Most of the construction occurred during the peak years of student enrollment. More schools were needed. The location of the schools in areas of residential expansion was consistent with the race-neutral neighborhood school concept. There is no evidence that the students attending these schools could have been accommodated in the existing schools or that land was available in the older, more racially mixed areas of the district to build new schools.

---

[12] In 1966, Linn had a minority population of 5.7% versus a district average of 16.5%. By 1969, the minority enrollment had grown to 12.5%.

Furthermore, the racially mixed schools were not being closed during this period of construction. Instead, new schools were being built in areas of residential integration. The schools being closed were formerly *de jure* black schools or schools with high minority enrollments; the possible exception being Lincoln Elementary School, which was located in an urban renewal site. Finally, over the years there has been increasing residential and school integration in the areas where the once all-white schools were constructed. In sum, it does not appear that the district's school construction policy has promoted segregated residential patterns or segregated schools.

G. Schoolsite Location.

Plaintiffs have criticized the decision to place a high school on the west side of Topeka--i.e., the construction of Topeka West High School in 1960. The evidence is convincing that Topeka West High School was built in response to the overcrowding of Topeka High School and the expansion of the student population in the western parts of Topeka. At the time Topeka West was built, the district had recently annexed a high school serving the east side of Topeka, Highland Park High School. Since Topeka West was built, the district had recently annexed a high school serving the east side of Topeka, Highland Park High School. Since Topeka High was centrally located, a new high school on the west side of the city was a

logical response to overcrowding. If the three high schools were aligned vertically (north to south) on a map and had attendance areas for each school which included east, west and central Topeka, then the high schools of the district would be more racially balanced. But, there has not been a persuasive showing that this alternative was practical or necessary to avoid the separation of white and black high school students in the district. The court believes the siting of Topeka West High School was a race-neutral decision.

H. School Boundary Location.

A review of the school boundaries as they have developed over thirty years does not reveal a segregative pattern that remains today. The boundaries set around the former *de jure* black elementary schools after this case was remanded by the Supreme Court appear to have perpetuated the racial identity of those schools. But, the schools have long been closed and the segregative effects of those boundaries have attenuated entirely.

By and large, the school attendance boundaries of the district reflect a commitment to neighborhood schools. Schools are centrally located in their attendance areas. Some attendance areas, e.g., Gage, McCarter, McClure, Stout, Quinton Heights and State Street, are long. But, these areas include large land tracts without residential population.

The attendance zones of schools with high minority populations are not gerrymandered to produce this result. In general, schools with high minority populations are not in areas with an average or higher than average white population. Nor are they near low minority schools in areas of average racial mixture.

Belvoir Elementary School is centered in an area with a high minority population. It is surrounded by other schools with higher than average minority populations. It is not *the* black school in a racially mixed area. It is a school with a higher than average black student population in a residential area with a higher than average black population. Highland Park North Elementary School, Lafayette Elementary School and Hudson Elementary School are similarly situated.

Quinton Heights and Avondale East elementary schools have higher than average minority populations, but they are surrounded by schools with mostly average to higher than average minority percentages.

Perhaps the most suspect school is Lowman Hill Elementary School. Lowman Hill has a higher than average minority population, but it is bordered on three sides by schools with lower than average minority populations (Potwin, Gage and Randolph). It is also bordered by Sumner Elementary School which is slightly above the district average for minority population. Although Lowman Hill has had a higher than average minority population, it has never had a majority minority population, and its minority percentage has been within fifteen percent of the district average in recent years.

Lowman Hill is centrally located within its attendance area, as are the schools which surround it. Its boundaries include two historically black residential areas which are closer to the Lowman Hill School than the other schools in the area. The boundaries of Potwin and Gage have remained relatively stable over twenty years. The boundaries of Randolph and Sumner have been expanded to increase the minority populations of the schools. Although Gage and Potwin have been predominantly white schools since the Supreme Court's decision in this case, the court cannot say that Lowman Hill is an isolated black school or vestige school when its boundaries for two decades have been consistent with the neighborhood school concept; it has never had a majority minority student populations; and, in recent years it has been relatively close to the district average for minority enrollment.

One of plaintiffs' criticisms of the district's course of desegregation is that schools with a higher than average minority population have been assigned students from closed schools that had even higher minority populations. For instance, Quinton Heights ultimately received students from Monroe. Lafayette and Highland Park North received students from Parkdale. Again, this is a product of a race-neutral neighborhood school concept. Students from closed schools were sent to nearby schools. Racial balance would have been improved to a greater degree if students from a closed school with a high minority

population were transported to a noncontiguous attendance area with a low minority population, or if white children were transported the opposite direction. But, this would have breached the neighborhood school policy consistently applied by the district. Plaintiffs' witness testimony also suggested that boundaries could shift in more than one attendance area (in a ripple effect) to more evenly distribute the minority student population after a school with a high minority population was closed. The feasibility of such a plan was not convincingly established in the evidence. Obviously, such efforts would detract from the central location of schools in their attendance areas and, to some extent, diminish the advantages of neighborhood schools.

In summary, the district's attendance zones are not segregatively gerrymandered. The district has consistently applied race-neutral, neighborhood school principles to the demarcation of attendance zones.

I. History of the Schools.

To reiterate, none of the four former *de jure* black elementary schools are open. Three of the four were closed by 1962. The fourth was closed ten years ago. Of the eighteen white elementary schools operating in 1954: seven have been closed; three have minority populations between five and ten percent; three have minority populations between forty and fifty percent; the remaining five schools have minority populations near the district average, between fifteen and thirty-two percent.

A history of the allegedly racially identifiable nonwhite schools follows.

Belvoir. The Belvoir School area was annexed into the district in 1960. The school had an average or slightly above average minority population at the time. In the 1960s, after the construction of two federally-subsidized housing projects in close proximity to the school, the minority population of the school increased to more than fifty percent. The minority student percentage continued to rise in the 1970s. After the Rice School was closed in 1981 and part of its population was combined with Belvoir, the minority percentage declined to sixty to sixty-five percent. In sum, Belvoir was a racially balanced school which became a majority black and minority school with the influx of minority residents into the attendance area. The increase of minority students at Belvoir was not caused by the school district. Indeed, the school district has taken action to modify the racial imbalance that exists at the school.

Hudson. When Hudson was constructed in 1963, it was an all-white school. After the construction of subsidized housing projects in the Hudson attendance area, and with the general increase of minority residents on the east side, Highland Park area, the minority student population of Hudson grew rapidly in the late sixties and early seventies. In 1983, the minority student population of Hudson exceeded forty percent for the first time.

Avondale East. The land representing the Avondale East attendance area was annexed into the district in 1959. In the 1967-68 school year, the school had a minority population of sixteen percent. The minority population grew rapidly in the following few years and then stabilized in the 1970s in the thirty to thirty-five percent rage. In 1984, the school exceeded forty percent in minority population for the first time. The school boundaries of Avondale East and Hudson have been relatively stable through the years. The increase in minority population at both schools appears to be the result of residential movement.

Highland Park North. The Highland Park North attendance area was annexed by the district in 1959. In the 1967-68 school year, the school had a minority student percentage of thirty percent. The average for the school district's elementary student population was seventeen percent. The minority percentage increased with the movement of minority residents to the attendance area. In 1978, with the addition of a large part of the Parkdale attendance area, the minority student percentage of Highland Park North grew from forty-seven to fifty-eight percent. When it closed, Parkdale had a minority percentage of 85.6%. In 1954, Parkdale was an all-white school located near the *de jure* black Washington School. After the Supreme Court decision in 1955, Parkdale enrolled a minority population of 14.7%. This increased to twenty-four percent to 1956. When Washington was closed, its attendance area was added to the Parkdale district. Of

course, this increased Parkdale's minority population significantly. Parkdale became a predominantly black school. When Parkdale was closed, its attendance area was split between the two closest schools--Highland Park North and Lafayette. Since 1978, the minority percentage at Highland Park North has remained around fifty-eight percent. Approximately fifty percent of the minority student population is black. The school district has contributed to the racial imbalance at Highland Park North only to the extent that it closed a school with a much higher minority percentage and assigned some of the students to Highland Park North.

Lafayette. Lafayette was an all-white school prior to the end of *de jure* segregation. In 1955, it had a minority population of 8.4%. This increased the following year to 13.7%. By 1968, the minority percentage at Lafayette was fifty-nine percent. When Parkdale was closed, Lafayette received part of the Parkdale attendance area. As a result, Lafayette's minority percentage increased from sixty-two to sixty-six percent. This figure has decreased in subsequent years. One factor in the decline may have been the assignment of part of the Rice School attendance area to Lafayette in 1981. For the last five years, Lafayette has had a minority population of fifty-six to fifty-nine percent. It should be noted that Lafayette has had a significant nonblack minority population. In the 1967-68 school year, the school had a twenty-nine percent nonblack minority percentage. In the 1985-86 school year, the school had a fifteen percent nonblack minority percentage.

Quinton Heights. Quinton Heights was an all-white elementary school prior to the end of *de jure* segregation. In 1955, it had a minority percentage of 2.8%. This increased to 7.26% the following year. By 1968, the minority population had increased to thirty-five percent. In September 1979, after the closing of Monroe and Polk Elementary Schools, Quinton Heights acquired the Monroe school attendance area. Its minority percentage increased to fifty percent in 1979. The minority percentage was approximately the same in 1985.

Lowman Hill. Lowman Hill Elementary School was an all-white school located near the *de jure* black Buchanan School prior to the Supreme Court decisions in this case. In 1955, Lowman Hill had a black population of 11.4%. This increased to 17.4% the following year. In 1959, Buchanan was closed, and its students were assigned to a new school at the Lowman Hill site. Plaintiffs' expert testimony estimated that this increased Lowman Hill's minority percentage to forty-three percent. Since that time, Lowman Hill's attendance area has been expanded to include parts of the Clay, Polk and Central Park attendance areas. For the last five years, Lowman Hill's minority student population has fluctuated between thirty-six and forty-one percent.

Eisenhower Middle School. This attendance area was annexed into the district in 1959. In the 1967-68 school year, Eisenhower Junior High had a minority percentage of 5.78%. This increased to twenty percent

in 1974 and twenty-nine percent in 1977. After the change to the middle school system in 1980, Eisenhower Middle School was one of six middle schools in the district and had a minority percentage of forty-five percent--approximately twenty percent above the district average for middle school students. In 1985, the minority percentage at Eisenhower Middle School was 48.6% and the district's minority average for middle school students was 26.9%.

To summarize, none of those schools plaintiffs allege to be racially identifiable nonwhite had been racially identifiable by plaintiffs' measures throughout the history of this case. Two factors have contributed to the increase of minority students at these schools. First, for all of the schools, there has been an increased percentage of minority residents in their attendance areas. In other words, the attendance areas have undergone a racial transition not caused by district action. Second, some of the schools have been affected by the expansion of attendance areas to include the attendance zones of schools with large minority populations. On the whole, the closing of the highly imbalanced schools had a desegregative effect upon the district's operation, although it aggravated the imbalance of nearby schools. The assignment of students from areas of minority concentration to nearby schools with higher than average minority populations was consistent with the race-neutral neighborhood school policy of the district. There has been no showing that assigning the student populations of the

closed schools to other adjacent attendance zones would have significantly improved the racial balance of the district today.

Plaintiffs have also alleged that several schools are racially identifiable as white schools. Two of the allegedly identifiable white schools are Gage and Potwin elementary schools. These schools were all-white before and after the Supreme Court decision in this case. In 1967, each school had only one minority student. In 1985, Gage had twenty-five minority students--9.47% of its student population; Potwin had eighteen minority students--7.77% of its student population. There are other elementary schools with low minority percentages: Bishop (10.5%); Crestview (8.9%); McCarter (9.16%); McClure (7.21%); McEachron (10.31%); Whitson (10.22%). These schools are located in west or southwest Topeka where there has been steady residential development over thirty years. All of the schools, like Gage and Potwin, have experienced increasing minority student populations. All of the schools, including Gage and Potwin, have had relatively stable attendance boundaries. One of plaintiffs' witnesses testified that if trends continue, the secondary schools which serve the western part of Topeka will become racially nonidentifiable, as measured by minority student percentage. One can assume that this may also occur in the elementary schools serving the same area. In sum, the district has several schools which historically have had low minority populations. These minority

populations are growing, however, without opposition by the school district.

J. Facilities.

There is no significant disparity in the quality of facilities available in schools throughout the district.

K. Extracurricular Activities.

There is no discrimination in the conduct of extracurricular activities in the district. Indeed, multiracial participation is guaranteed in certain activities such as cheerleading and student government.

L. Curriculum.

There is no significant disparity in the curriculum and progress of study in the schools throughout the district. In recent years, the district has taken diligent and meticulous steps with the development and use of curriculum guides to assure that all schools and all grades work consistently toward specific and uniform academic goals.

M. Transportation.

There is no discrimination in the provision of transportation in the school district.

N. Faculty and Staff.

Plaintiffs demonstrated that in the years immediately following the Supreme Court decisions, the district discriminated in the hiring and placement of minority staff. In 1963, however, the district passed a resolution against discrimination in the hiring and employment of personnel. At least since 1976, the district has had an affirmative action program and has tried to recruit minority faculty and staff.

In the 1985-86 school year, the district's work force was 12.1% minority. Minority employees were represented at all levels of the work force. Twenty percent of the service workers were minority members. Approximately fifteen percent of the managerial workers were minority members. The current superintendent is a black man, as are the principals of two of the three high schools (Topeka West High School and Highland Park High School). No criticism of the district's affirmative action policy has been made in this case. Nor have the district's hiring policies in recent times been shown to be discriminatory.

Plaintiffs' major contention with regard to faculty and staff is that the assignment of faculty and staff has served to racially identify schools in the district. Plaintiffs have demonstrated that in general there are a greater than average number of minority faculty and staff in schools with a greater than average number of minority students. Elementary schools with minority enrollments greater than fifteen percent of the district

average had fifty-three percent of the minority staff at all the district's elementary schools in 1985.[13] Elementary schools with minority enroliments greater than fifty percent had twenty percent of the minority staff at all the district's elementary schools. Elementary schools with minority enrollments less than fifteen percent of the district average had sixteen percent of the district's minority staff at elementary schools.

In the 1985-86 school year, minority staff assignments at the elementary schools ranged from zero percent at McClure to thirty-three percent at Avondale East.[14] These figures have varied over the years, however. During the last ten years, both Avondale East and McClure have had minority staff percentages very close to the district average. In the 1977-78 school year, Avondale East had a minority staff percentage of 14.6%; one year later, the figure was 9.8%. In the 1979-80 school year, McClure had an 11.6% minority staff.

At the high school and middle school levels in the 1985-86 school year, minority staff percentages ranged from 24.7% at Robinson Middle School to 2.5% at

---

[13] The "faculty and staff" data available to the court are for the school years 1973-74 to 1985-86. The data lump together faculty and other employees assigned to the schools. Figures for faculty assignments only are available for the 1981-82 school year alone.

[14] The minority staff percentage for all elementary schools was 11.23%.

Topeka West High School.[15] Again, these percentages have fluctuated. In the 1984-85 school year, Topeka West had a 7.5% minority staff. In the 1980-81 school year, Robinson Middle School had a 9.1% minority staff--a figure below the district average for that school year.

In the 1985-86 school year, Belvoir, with the highest minority elementary student percentage, and Potwin, with the second lowest, had virtually equal minority staff percentages. Highland Park High School, with an above average minority student percentage had a below average minority staff percentage. The sole secondary school with a minority enrollment greater than fifteen percent of the district average (Eisenhower Middle School), had only fourteen percent of the minority staff at the secondary level. Thus, there are clear exceptions to the trend demonstrated by plaintiffs.

Moreover, the difference between having a greater than average number of minority staff and having a less than average number of minority staff is very small in most cases. Only six schools in 1985 had minority staff percentages beyond $\pm$ 10% of the district average for elementary and secondary schools.[16] Three of

---

[15] The minority staff percentage for all high schools and middle schools was 12.65%.

[16] The $\pm$ 10% range was a remedial target approved by the court and the parties in *United States v. Texas Education Agency*, 649 F.2d 1104 (5th Cir. 1982). See also *Board of Education v. Dowell*, 375 F.2d 158

these schools were within eleven percent of the district average. Furthermore, all of the schools have been within the ±10% range in the last ten years.

Perhaps as important as the racial percentages of the faculty and staff is the fair assignment of qualified and dedicated faculty throughout the district. The principals assigned to two schools with relatively high minority student percentages, Highland Park North and Lafayette, have received awards recognizing their work. Furthermore, while there was some testimony that black students have not always been motivated by faculty to fulfill their potential, in recent years it appears that the school administrators and teachers have been dedicated to the belief that all children can learn and achieve.

Examining the school system as a whole, despite the tendency to have more minority staff in schools with a greater than average minority student population, the court does not believe the district's assignment policies serve to identify schools as intended for white or black students. The pattern identified by plaintiffs is not monolithic. The current percentages of minority staff in the district's schools are generally within ranges acceptable to other courts in desegregation litigation. Other facets of faculty and staff policies are nondiscriminatory. In sum, the record before the court with regard to the district's approach to faculty and staff is not indicative of a dual system of education.

(10th Cir. 1967).

O. Community Attitudes.

Plaintiffs employed an opinion survey corporation to survey Topeka residents about their attitudes towards the schools in U.S.D. #501. Four hundred interviews were conducted by telephone from August 27, 1984 through September 1, 1984. The survey attempted to focus upon the opinions of adults who had or recently had children in the Topeka school system. One of the conclusions of the survey was that people in the community perceive some schools as "black" or "minority" schools and other schools as "white." The survey also found that the schools perceived by the respondents in the survey as "white" are also considered better than the schools perceived as "black" or "minority."

Defendants employed a public opinion researcher to critique the survey. Several well-founded objections were made.

The court does not believe the survey results are important to the ultimate issues in this case. At the outset, the court discounts the answers concerning the quality of education or quality of facilities at the schools. The survey's respondents were not education experts. They did not examine the entire school system before stating an opinion. Quite simply, in a case where the court is asked to compare school quality, the opinions of lay persons familiar with only one school or a few schools are not as helpful as the opinions of persons familiar with the entire system.

The questions concerning the racial identity or racial balance of schools seem more pertinent to issues in this case. The questions are related to a goal of desegregation--i.e., to achieve a system "without a 'white' school and a 'Negro' school, but just schools." *Green*, *supra*, 391 U.S. at 442. This goal, however, as represented in the survey questions, could be seen as utopian. The questions could be understood as asking whether people look past race in characterizing a school. While the world would be a better place if people did not see "race," that is not the constitutional standard which governs this case.

As discussed before (see footnote 7, *infra*), racial identity or racial balance are ambiguous terms. In the minds of the experts who testified in this trial, a school in Topeka with three white students to every minority student is a colorless or a racially balanced school. But, it is impossible to determine from the survey how Topeka residents characterize such schools because the survey respondents were not asked to characterize schools with that type of student ratio. They were only asked to characterize schools with much higher than average or much lower than average minority populations.

Furthermore, the responses to these questions were inconsistent. A majority of respondents familiar with Quinton Heights Elementary School and a plurality (49%) of the respondents familiar with Highland Park North Elementary School considered those schools to be racially balanced even though both schools had majority

minority populations at the time of the survey. In contrast, a majority of respondents familiar with Belvoir Elementary School said it was a black school, although its minority percentage at the time was between that of Quinton Heights and Highland Park North. When respondents were asked if the district had black schools and, if so, to identify the schools, two schools relatively close to the district average for minority student population were most often listed as black schools--Highland Park High School and Topeka High School. Most respondents considered Eisenhower Middle School to be racially balanced, although it had the highest minority student percentage of secondary schools at the time of the survey. The only consistent thread to the survey is that schools with 90% white populations were often characterized as white schools. But, there were some exceptions to this rule. For instance, a plurality of respondents familiar with Gage Elementary School thought it was racially balanced even though its white population at the time was approximately ninety-two percent. Moreover, the school most often identified as "white," Topeka West High School, was within twenty percent of the average minority student population.

There were other problems with the survey. For instance, women were overrepresented in the survey. This could have affected the results since male and female answers tended to be different. Other segments of the population were left out or overrepresented. It is uncertain whether this may have altered the results.

Finally, as defendants have noted, only a small percentage of respondents concurred with most of plaintiffs' racial characterizations of schools. For example, only fifteen percent of all the respondents listed Belvoir as a black school; seventy-five percent of the respondents had no opinion. For all the reasons previously listed, the court does not believe the survey of public opinion is strong evidence that segregation remains in U.S.D. #501.

P. Equality of Education.

A part of the trial was devoted to discussion of the harms of school segregation. Plaintiffs presented expert testimony describing the debate on the matter and the outcome of studies in the field. Defendants' expert presented a contrasting view, at least with regard to the effect of desegregation upon students' test scores. This court will postulate that school segregation is harmful because *de jure* segregation is unequivocably illegal.[17]

It should be reemphasized, however, that the issue at this juncture is not the harms of segregation, but whether intentional segregation or its vestiges remain in the district. Assuming that school segregation

---

[17] In *Washington v. Seattle School District No. 1*, 458 U.S. 457, 472 (1982), the Court stated: "[I]t should be . . . clear that white as well as Negro children benefit from exposure to 'ethnic and racial diversity in the classroom.'" Quoting *Columbus Board of Education v. Penick*, *supra*, 443 U.S. at 486 (Powell, J., dissenting).

negatively affects test scores of minority students, then reasoning backwards (from effect to cause), evidence of inferior achievement by students in schools with high minority populations may be evidence of a vestige of segregation in the district.

Plaintiffs attempted to prove that a disparity in achievement existed by charting according to school, the sixth grade pass percentages on the Kansas Minimum Competency Tests in reading and math for 1985, and making the same comparison of results on the Iowa Test of Basic Skills for 1984-85. No attempt was made to control for any other factor that might influence achievement. In general, the charts show that classes in schools with low minority populations have higher pass percentages and higher scores on the Iowa Test of Basic Skills than classes in schools with average or higher than average minority populations.

Defendants presented a much more careful and comprehensive examination of the issue.[18] Scores on the Kansas Minimum Competency Tests were followed for the years 1980, 1982, 1983, 1985 and 1986. The results were categorized as to the schools' racial mixture: less than ten percent minority; between ten and forty percent minority; and over forty percent minority. Students' varying ability was controlled for with the use of scores on the Cognitive Abilities Test.

---

[18] Ex. 1109, "An Analysis of Black Student Achievement in USD 501 Topeka, Kansas: 1980-1986" by Dr. John P. Poggio.

Income level was controlled for by determining whether a student participated in a free or reduced lunch program. For the year 1986, information was gathered concerning other factors that might affect achievement. A questionnaire was completed by students to obtain information concerning many factors including: parents' education; parents' expectations and support; students' study and work habits; students' reading habits; and students' self-concept. A mobility analysis was also done to track the test scores of students who transferred from one building mixture to another. Approximately 13,000 reading test scores and 13,000 mathematics test scores were examined. Forty-six different analyses were completed.

The conclusion of the study was that the racial composition of schools in Topeka during the period in question did not significantly affect test scores in reading or mathematics. The study further found that movement of students to schools with different racial compositions did not affect proficiency levels. Finally, the study found that many other factors were much more important to achieve than the racial composition of a school.

Plaintiffs criticized defendants' study for improperly controlling for ability. The question was raised as to whether it is possible to control for ability. The court believes, however, that a reasonable and conscientious effort was made by defendants' expert to determine what effect, if any, the racial composition of the district's schools has upon student achievement. The

study was characterized by an expert in the field, other than the author of the study, as "one of the most comprehensive, largest and most scientifically sound studies" that has been made on these issues. Tr. 2396. Although the results of the study are subject to the national debate which has endured for years on this issue, the most persuasive evidence *at this trial* indicates that the racial composition of the district's schools has an insignificant impact on student achievement. Thus, inferior achievement, as a vestige of segregation, has been eliminated.

Q. Opportunities for Desegregation.

The failure to take desegregative action by a district that had an affirmative duty to desegregate should be carefully examined by the court. If a district has consistently dragged its feet on desegregation, then the vestiges of the segregated system may remain.

The Board of Education of Topeka's public schools did not implement a race-conscious student assignment plan following the Supreme Court decisions in this case. The law, as interpreted by this court upon the remand of this case, did not appear to require this action. Nevertheless, the closing of three formerly all-black schools, the enrollment of black students at formerly all-white neighborhood attendance centers, and the inclusion of white residences in the attendance area of the fourth formerly all-black elementary school, had noticeable desegregative results. One of plaintiffs'

experts suggested a walk-in desegregation plan was feasible in 1955 and would have produced better results. Ironically, the current attendance zones for elementary schools in central Topeka are not radically different from the walk-in pattern suggested by plaintiffs' expert.

In 1968, with the *Green* decision, and three years later with the *Swann* decision, it became clear that a race-neutral neighborhood school system would not satisfy the legal duty to desegregate unless it effectively desegregated student attendance patterns. In 1974, the Department of Health, Education and Welfare (HEW) brought an administrative complaint against U.S.D. #501 over the district's desegregation. The complaint was dismissed with the district's initiation of short-range and long-range proposals involving the closing of schools, construction of facilities and establishment of middle schools. Schools with the highest minority percentages were closed. Still, a few schools with majority minority student populations remained. During the time that action in response to the HEW suit was considered, the rough outlines of a plan to eliminate all majority/minority schools was developed at the request of the Board of Education. It was not pursued in favor of the long and short-range proposals which were more consistent with neighborhood schools, but still satisfied HEW.

Plaintiffs have asserted that one result of the district's desegregation effort in the 1970s was the completion of Quinton Heights' transformation into a

racially identifiable school. Plaintiffs contrast Quinton Heights with the adjacent Stout School. Stout's minority population is approximately twenty percent less than Quinton Heights' minority enrollment. Still, Stout's minority percentage is very close to the district average. Thus, by plaintiffs' definition, it is not a "white" school bordering a "black" school. Moreover, the opportunity for further "desegregation" of these schools within the framework of smaller neighborhood schools is not apparent from the testimony or exhibits in this case.

In 1984, the Board of Education developed "Plans N and X" which represented a departure from the smaller neighborhood school system. Several goals and justifications unrelated to school desegregation were suggested for the plans. But, one of the plans' "assumptions" was that all majority minority schools would be eliminated.

Plan N required closing two middle schools and sixteen elementary schools. Two new elementary schools would be built, and one of the middle schools would be converted to an elementary school. The total construction cost of the proposal over a five-year period was estimated to be $13.2 million, although significant annual operating savings were projected.

Plan X required closing four middle schools and seventeen elementary schools. One new middle school and one new elementary school would be built. Four middle schools would be converted to elementary schools. The cost of construction was estimated to be

$15.4 million, although, again, significant operating savings were forecast.

Under Plans N and X, it was projected that no school's minority enrollment would exceed forty-five percent. In each plan, however, there would be two elementary schools with a white enrollment exceeding ninety-five percent, and at least four schools with white populations of approximately ninety percent or more.

The Board conducted public meetings in all parts of the district for comment upon the plans. Public reaction was uniformly and vigorously negative. No significant segment of the population supported the plans. Because of the hostile reaction to the plans, further consideration of the plans was dropped. No vote was ever taken upon them.

Public reaction to the plans indicated a desire to maintain smaller neighborhood schools. No evidence established that the opposition to Plans N and X, or the failure to implement the plans, was racially motivated.

The court does not believe the district's conduct over thirty years indicates a desire to perpetuate segregation by foregoing opportunities to desegregate schools. After the Supreme Court mandated that children be admitted to schools on a nondiscriminatory basis, the district completed efforts to apply a race-neutral neighborhood school attendance system to all students. This produced substantial integration. After the Supreme Court encouraged race-conscious efforts to eliminate the vestiges of segregation and HEW

challenged the progress of desegregation in the district, additional action was taken to improve the racial balance of the student bodies in the district. In recent years, the Board of Education has demonstrated a sensitivity and commitment to maintain and improve integration within the district by drafting long-range proposals with racial mixing goals in mind. The district's efforts to desegregate have been helped by increased residential integration. The district has not bucked the demographic forces that have improved the racial balance of schools.

At any time, more could have been done to achieve racial balance in the schools. But, it begs the issue of this case to argue that racial balancing must be done today because it was not done yesterday. More should be done to improve racial balance in the schools if the existing imbalance follows from defendants' past intentional segregative conduct. The district's history of action or inaction toward racial conditions in the district does not suggest that the racial imbalance of the schools derives from the *de jure* system or a foot-dragging segregationist policy.

R. Other Factors.

Since 1976, members of the Board of Education of U.S.D. #501 have been elected through a district system which improves the opportunities for minority membership on the Board. There have been minority members on the Board for several years serving in

positions such as President of the Board, where vigorous and effective leadership has been displayed. The Board of Education currently has minority representation.

The district administers various events and programs to encourage interracial contact and ethnic awareness. One notable program is the Topeka Adventure Center. All fifty-grade students attend the Center for two weeks in groups of approximately 100. The groups are balanced by sex, race, geographic part of the city and socioeconomic level. The Center emphasizes student initiative, participation and cooperation in a variety of activities organized in a microcosmic, nonclassroom setting.

S. Summary.

In conclusion, after reviewing a multitude of factors which bear on the issue, the court is convinced that students in U.S.D. #501 are admitted to school and educated on a nondiscriminatory basis. There is no illegal, intentional, systematic or residual separation of the races.

Plaintiffs appear to be arguing for a judicial fine-tuning of the desegregation process in U.S.D. #501. As compared with many desegregation cases, relatively small changes in student and staff assignment would create the balance which plaintiffs define as desegregation. Blind reliance upon statistical measures of balance, at least with regard to student assignment,

was persuasively rejected by the Fifth Circuit in *Price*. Although plaintiffs assert other factors in corroboration of their thesis, a careful review of all relevant circumstances establishes that the *de jure* system of segregation has been dismantled and its vestiges eliminated.

The facilities, curriculum, progress of education, extracurricular activities and transportation offered by the district are not distinguishable on racial grounds.

Students of different races attend school together in significant numbers in every part of the district. School attendance is determined by a consistent application of neighborhood school principles. There is no gerrymandering. The race-neutral intent of these principles is untainted by past segregative practices. The court is persuaded that *de jure* segregation either had no significant effect upon residential patterns in Topeka or that its impact on residential patterns has attenuated to insignificance. Thus, the factors which bear on the racial condition of school attendance are the factors which affect residential choice--economic, social and geographic factors--not matters directed by defendants.

Racial balance does not exist in the district's schools. Some schools have a significantly greater minority student population than other schools. The schools with higher or low minority percentages, however, are not the product of *de jure* segregation or convert intentional segregation. They are not isolated

in neighborhoods with contrasting racial complexions. The schools with high minority populations have not been "minority" schools throughout their history. The schools with low minority populations are receiving increasing numbers of minority students. Demographic forces, uncontrolled by defendants, form the racial composition of the schools.

Disparities also exist in the numbers of minority faculty and staff at schools in U.S.D. #501. These disparities, however, are neither so large, nor so consistent that they identify schools as racially segregated.

Regardless of the merits of racial balance, the imbalance perceived in this case is neither unconstitutional *per se*, nor unconstitutional in conjunction with other factors such as community attitudes, test scores, faculty and staff assignment or opportunities for improvement. The record reflects that defendants did not cause the present imbalance by engaging in or perpetuating the vestiges of illegal race-conscious conduct. An examination of the school system as a whole reveals an integrated system free of the characteristics of *de jure* segregation.

X. Title VI.

Plaintiffs have premised their action in part upon Title VI of the Civil Rights Act of 1964. This statute prohibits racial discrimination in programs receiving

federal financial assistance. The school district receives federal financial assistance--some of which is applied generally and some of which is earmarked for specific programs. Therefore, Title VI applies to the district.

Title VI, however, only reached intentional discrimination, unless agency regulations promulgated pursuant to Title VI provide otherwise. *Alexander v. Choate*, 469 U.S. 287, 293 (1985). The record does not establish that defendants intentionally discriminate against plaintiffs or that a policy of intentional discrimination has had effects continuing to the present. Nor has a proper case for relief under federal regulations been proved. Plaintiffs have asserted that the district violated 34 C.F.R. §100.3(b)(2). But, the district's student and staff assignment criteria do not have the effect of discriminating against students because of their race or of impairing the education of minority students. Therefore, relief under Title VI is not warranted.

XI. The State Board of Education.

Plaintiffs have alleged that the State Board of Education (SBE) is responsible for the racial conditions within U.S.D. #501, more for what SBE has *not* done than for what SBE has done. When this case was filed, SBE did not exist. The State had a Superintendent of Public Instruction, but this officer did not have general supervisory powers over local public schools. The State's involvement in this case was limited to

defending the constitutionality of the statute which permitted, but did not command, segregation in grades K-6 in Topeka's schools. After this defense failed, the statute was repealed. In 1966, Article 6 of the Kansas Constitution was amended. This amendment provided for the creation of SBE which would supervise elementary and secondary education. The Constitution expressly reserved control of public schools to locally elected school boards, however. See *State ex rel. Miller v. Board of Education*, 212 Kan. 482, 511 P.2d 705 (1973).

This is an official capacity action. The individual members of SBE are being sued in their official capacity for injunctive relief. To prevail in such a suit, plaintiffs must demonstrate that SBE is a "moving force" behind the illegal segregation which they allege. *Kentucky v. Graham*, ___ U.S. ___ (slip op. at pp. 6-7, 1985). It must be established that SBE's policy or custom played a part in the presence of illegal segregation within U.S.D. #501. *Id.* In *Rizzo v. Goode*, 423 U.S. 362, 377 (1976), the Court reversed an injunctive decree involving police conduct in Philadelphia, distinguishing two school desegregation cases (*Brown* and *Swann*) on the grounds that the defendants in *Rizzo* were not shown to have deprived others of their constitutional rights by their *own* conduct.

In this case, plaintiffs have attempted to establish liability of the members of SBE by showing that SBE

failed to police the desegregation process in U.S.D. #501 and failed to provide assistance, guidance and impetus for desegregation. The court finds that SBE *has* been inactive in this area. But, plaintiffs have failed to demonstrate that the policy or custom of SBE is a root cause or moving force behind the racial conditions which currently exist in the district. There has been no showing that the conduct of SBE has deprived plaintiffs of their constitutional rights. The responsibility for student and staff assignment as well as for the equalization of educational opportunity within the district rests with the local school board. The State has repealed the legislation authorizing segregation. Legislation prohibiting discrimination has been enacted. Any residue of segregation traceable to the repealed statute has been eradicated in the court's opinion. For these reasons, the court believes SBE is not responsible for the racial conditions present in the district.

XII. Conclusion.

U.S.D. #501 provides a high-quality educational opportunity to its students on a nondiscriminatory basis. There is no significant or consistent disparity in the faculty and staff, facilities, transportation or extracurricular activities available to students. Students are assigned to schools on a race-neutral basis. The district's neighborhood school approach has achieved a high level of integration, but not racial balance by any measure. The racially imbalanced schools are not the

product of overt or covert intentional segregative conduct. The court is convinced after reviewing a multitude of factors that the vestiges of past segregation in the district have been dissolved by time, demographic change and the district's steady course of race-neutral and integrative action. This case has reached an appropriate denouement. The district has a unitary system of education.[19]

Accordingly, plaintiffs' claims for relief are denied.

IT IS SO ORDERED.

Dated this 8th day of April, 1987 at Topeka, Kansas.

Richard D. Rogers
United States District Judge

---

[19] Under *Dowell v. Board of Education*, 795 F.2d 1516 (10th Cir. 1986), the original order to desegregate remains effective.
